TO DOCKET 7292**

**EXHIBIT A – Previously filed redacted in
DKT 8118**

EXHIBIT B – Filed redacted

IN THE CIRCUIT COURT OF THE SEVENTEENTH JUDICIAL CIRCUIT IN AND FOR BROWARD COUNTY, FLORIDA

CLARE AUSTIN,

Plaintiff,

-VS- CASE NO. 15-008373

Div: 07

C.R. BARD, INC., a foreign corporation and BARD PERIPHERAL VASCULAR, INC., an Arizona corporation, MATTHEW ROBBINS, MD., and CLEVELAND CLINIC FLORIDA,

Defendants.

VIDEOTAPED DEPOSITION OF.
MARK J. EISENBERG, M.D., M.P.H.
ON WEDNESDAY, AUGUST 17, 2016
IN MONTREAL, QUEBEC, CANADA.

VIDEOGRAPHER: DAVID OXILIA
COURT REPORTER: C.L. KLEIN

1 UPON COMMENCING AT 10:05 A.M., THIS SEVENTEENTH
2 DAY OF AUGUST 2016 at the offices of Decision
3 One, One Place Ville Marie, Suite 2901, Montreal,
4 Quebec, Canada, H3B 0E9.

5
6 BY THE VIDEOGRAPHER: Good morning.
7 We are now on the record. My name is David
8 Oxilia. I am the Videographer representing
9 Veritext Legal Solutions. This begins the
10 deposition of Dr. Mark J. Eisenberg, M.D., M.P.H.
11 in the case entitled Clare Austin versus C.R.
12 Bard Inc. et al. This is case number 15-008373,
13 Division 07. This deposition is taking place at
14 Decision One in Montreal, Quebec, Canada on
15 August 17, 2016. The time on the video monitor
16 is 10:05 a.m. The Court Reporter today is Cherie
17 Klein. Will Counsel please state their
18 appearances for the record.

19 MR. ROTMAN: Steve Rotman for
20 Plaintiffs.

21 MR. MANKOFF: Joshua Mankoff for
22 Plaintiffs.

23 MR. JOHNSON: Joe Johnson
24 representing Clare Austin.

25 MR. NORTH: Richard North

1 representing the Bard Defendants.

2 MR. BUSMAN: Phil Busman for Bard.

3 BY THE VIDEOGRAPHER: Thank you.

4 The Court Reporter will now swear in the Witness.

5 WITNESS SWORN

6 DIRECT EXAMINATION

7 BY MR. NORTH:

8 Q. Good morning, Dr. Eisenberg.

9 A. Good morning.

10 Q. As I introduced myself earlier, my
11 name is Richard North and I represent the Bard
12 Defendants in this action. Today I am going to
13 be asking you some questions about your work in
14 this case and the opinions you may have reached
15 since you have been designated as an expert
16 Witness. If at any time I ask you anything that
17 you did not hear or do not understand, please ask
18 me to repeat it or rephrase it. Is that
19 agreeable?

20 A. Yes.

21 MR. NORTH: And Counsel, I would
22 also propose that we proceed with this deposition
23 in accordance with the usual stipulations. It's
24 being taken by agreement and by notice under the
25 Florida Rules.

1 BY MR. NORTH:

2 Q. Doctor, let me hand you what's been
3 marked as Exhibit 1, which is the Notice that was
4 filed for your deposition. Have you seen this
5 before?

6 A. Yes. Yes, I have.

7 Q. And if you would look at Exhibit A
8 to the Notice, which is a list of the documents
9 you were requested to bring, did you bring any of
10 these items to the deposition today?

11 A. It was my understanding that all of
12 these documents have been provided to you
13 directly.

14 Q. So nothing was brought separately
15 today?

16 A. The only thing I brought separately
17 were a few handwritten calculations that I have
18 here.

19 Q. And what sort of calculations are
20 those?

21 A. These are sample size of power
22 calculations and calculations of confidence
23 intervals for studies of different sample sizes.

24 Q. Concerning what underlying data?

25 MR. ROTMAN: Objection.

1 MR. JOHNSON: No problem.

2 BY MR. NORTH:

3 Q. And I would also ask, Doctor, that
4 as you answer questions, try to avoid a nod of
5 the head, or uh huh or uh uh, because it makes it
6 difficult for the Court Reporter to create a
7 transcript.

8 A. Understood.

9 Q. And you have been deposed before,
10 haven't you?

11 A. Yes, I have.

12 Q. On how many occasions?

13 A. I can't say exactly. The last time,
14 I believe, was five years ago or more, so I would
15 have to go back and look.

16 Q. Have you ever testified in Court?

17 A. I have.

18 Q. On how many occasions?

19 A. Again, I would have to go back and
20 look. The last time was at least five years ago.

21 Q. Do you think you have testified in
22 Court as many as five times?

23 A. No, I don't believe so.

24 Exhibit 1 was marked for
25 identification.

1 THE WITNESS: I am sorry. Could you
2 repeat the question?

3 BY MR. NORTH:

4 Q. You said these are calculations of
5 sample sizes and confidence intervals. What data
6 were you using to make these calculations?

7 MR. ROTMAN: Objection.

8 THE WITNESS: Well, the first set of
9 calculations is just calculations of confidence
10 interval sizes depending on various sample sizes,
11 so not referring to any specific study. So I
12 looked at different sample sizes, and different
13 potential complication rates and looked at what
14 size the confidence intervals would be around the
15 point estimates and complication rates. So that
16 would be the first set of calculations. The
17 second set of calculations are sample size and
18 power calculations, if one were to design a
19 clinical trial comparing a predicate device with
20 low complication rates and a newer device with
21 higher complication rates. And these calculations
22 were calculating sample sizes for the two arms of
23 the trial that would be required to look and
24 identify the various differences that I
25 presupposed.

1 BY MR. NORTH:

2 Q. Okay.

3 A. The third set of calculations is
4 again sample size calculations for clinical
5 trials if one wanted to identify differences
6 between a -- two different complication rates.
7 And the complication rates that I was looking at
8 came from the Grassi article.

9 Q. If I could see those just a minute.

10 And we are going to have them marked as Exhibits
11 with the understanding you can keep the originals
12 and then we will make copies.

13 Exhibits 2, 3 and 4 were marked for
14 identification.

15 BY MR. NORTH:

16 Q. Just so the record is clear, what we
17 have marked as Exhibit 2 are the first set of
18 calculations you described concerning confidence
19 intervals.

20 A. Yes.

21 Q. What we have marked as Exhibit 3 is
22 the second group of calculations you have just
23 discussed, which deal with sample size for a
24 projected clinical trial.

25 A. Yes.

1 response provided by the Plaintiff in this case.
2 Does that look to be a copy of your previous
3 testimony list?

4 A. Yes.

5 Q. And the second from the bottom, what
6 does that concern? I believe it's -- I can't say
7 this -- Aprotinin?

8 A. Yes.

9 Q. That involved a drug or
10 pharmaceutical product manufactured by Bayer
11 Corporation, didn't it?

12 A. I believe so.

13 Q. Is that the only time you have
14 testified in a case involving a pharmaceutical
15 product or a medical device?

16 MR. ROTMAN: Objection.

17 THE WITNESS: Again, I would have to
18 go through. This happened a while ago, so I
19 would have to go through these again to say with
20 assurance, but I believe so.

21 BY MR. NORTH:

22 Q. As you sit here today you cannot
23 recall another case, other than the Bayer
24 proceeding, in which you testified where there
25 was an issue concerning a pharmaceutical product

1 Q. And Exhibit 4 focuses on, as I
2 understand it, sample sizes that -- for a
3 clinical trial that would make comparisons
4 between two different complication rates.

5 A. That's correct.

6 Q. Okay. Are those the only documents
7 you brought with you today?

8 A. Yes.

9 Q. In looking at the previous cases
10 that you have testified in as an expert witness,
11 we were provided with a list of those and I am
12 going to mark that as an Exhibit. It appears
13 most of those cases were medical malpractice
14 actions. Is that correct?

15 A. I believe that's correct, yes.

16 Q. We saw that you did testify as an
17 expert in a multi-district proceeding against
18 Bayer, the manufacturer.

19 A. Yes. I would have to refresh my
20 recollection with that.

21 Q. Exhibit 5 was marked for
22 identification.

23 BY MR. NORTH:

24 Q. This has been marked as Exhibit 5,
25 and this is an attachment to an interrogatory

1 or a medical device?

2 MR. ROTMAN: Objection.

3 THE WITNESS: I don't recall being
4 deposed or testifying, yes.

5 BY MR. NORTH:

6 Q. Okay. In your medical malpractice
7 actions are you generally testifying on behalf of
8 the Plaintiffs, or on behalf of the physicians or
9 is it both?

10 MR. ROTMAN: Objection.

11 THE WITNESS: I have been consulted
12 for both Plaintiffs and Defendants. I think most
13 of the -- of the depositions and testimony were
14 on behalf of the Plaintiffs.

15 Exhibit 6 was marked for
16 identification.

17 BY MR. NORTH:

18 Q. Let me hand you what's been marked
19 as Exhibit 6. Is that a copy of your curriculum
20 vitae?

21 A. Yes, it is.

22 Q. And this one appears to be dated
23 May 23rd of 2014, if you look at the bottom
24 left-hand corner.

25 A. Yes, that's correct.

1 **Q. Do you have an updated one since
2 then?**

3 **A. I do, and I believe that I --**

4 MR. ROTMAN: I believe he has
5 provided that to us and I understood that we had
6 provided it to you. I am not sure, because I
7 wasn't the one doing it. Joe?

8 MR. JOHNSON: I am not sure which
9 one we provided. I assume whichever one we were
10 provided was in turn provided.

11 MR. NORTH: My understanding is the
12 one we were provided was from May 23rd of 2014,
13 the one that has been marked as an Exhibit. We
14 would ask that an updated c.v. please be provided
15 to us.

16 MR. JOHNSON: Sure.

17 BY MR. NORTH:

18 **Q. Now, you are a medical doctor?**

19 **A. I could e-mail you right now if that
20 will assist you.**

21 **Q. Okay. You are a medical doctor?**

22 **A. Yes. I am a cardiologist and a
23 clinical epidemiologist. So I am a medical
24 doctor, yes.**

25 **Q. Do you consider yourself an**

1 **are you part of an interventional cardiology
2 group?**

3 **A. Well, there is a group of us
4 interventional cardiologists, but we are a
5 sub-set of a general cardiology group.**

6 **Q. Are there other interventional
7 cardiologists in your group that implant inferior
8 vena cava filters?**

9 **A. No.**

10 **Q. Are there interventional
11 radiologists at your hospital that implant
12 filters?**

13 **A. Yes, we have interventional
14 radiologists that implant filters at our
15 hospital.**

16 **Q. Do you know what brand of filters
17 they are presently implanting?**

18 **A. If I am not mistaken, they are
19 implanting a variety of filters, so I can't tell
20 you which ones, but it's not just a single brand.**

21 **Q. Do you know if they are presently
22 implanting any Bard filters?**

23 **A. I do not know that.**

24 **Q. I believe you said you were both an
25 interventional cardiologist and a clinical**

1 **interventional radiologist?**

2 **A. Well, I am an interventional
3 cardiologist, so I am not an interventional
4 radiologist but I do a lot of the same techniques
5 that interventional radiologists do.**

6 **Q. Did you implant inferior vena cava
7 filters as a part of your practice?**

8 **A. No, I have never implanted inferior
9 vena cava filters.**

10 **Q. Have you retrieved inferior vena
11 cava filters?**

12 **A. I have retrieved fragments of
13 catheters from radiation but I have never
14 retrieved an inferior vena cava filter.**

15 **Q. Have you ever implanted stents of
16 any sort?**

17 **A. Yes, I routinely implant stents.**

18 **Q. What facility are you primarily
19 associated with now?**

20 **A. The Jewish General Hospital, which
21 is one of the McGill hospitals here in Montreal.**

22 MR. ROTMAN: Off the record.

23 ---(OFF-THE-RECORD DISCUSSION)---

24 BY MR. NORTH:

25 **Q. Doctor, at McGill, at your hospital**

1 **epidemiologist.**

2 **A. Yes, I am.**

3 **Q. Define for us what a clinical
4 epidemiologist is.**

5 **A. Well, I have a masters of public
6 health degree from Harvard where I studied
7 biostatistics and epidemiology as well as other
8 topics. So I spent half my time doing clinical
9 cardiology, including interventional cardiology,
10 and I spent half my time doing research. And the
11 research that I do is clinical epidemiology
12 research, so that involves clinical trials,
13 systematic reviews, meta analyses, cohort studies
14 as well as a variety of other methodologies that
15 are within the rubric of clinical epidemiology.**

16 **Q. Have you ever been the lead
17 investigator of a clinical trial?**

18 **A. I have.**

19 **Q. On how many occasions?**

20 **A. I believe five clinical trials.**

21 **Q. Generally what did those clinical
22 trials involve?**

23 **A. I did two clinical trials with
24 patients who had percutaneous coronary
25 interventions -- among patients who had**

1 angioplasty, and they were randomized to routine
 2 stress testing versus a more conservative
 3 strategy, and then they were followed up to see
 4 if more intensive stress testing strategy made a
 5 difference in outcomes. I did a clinical trial
 6 for patients with non-QA myocardial infarctions,
 7 and they were randomized to an invasive strategy
 8 versus a conservative strategy to see which one
 9 had better outcomes. I did a clinical trial in
 10 patients who had acute coronary syndrome or
 11 myocardial infarctions and who were smokers, and
 12 they were randomized to Bupropion, which is an
 13 anti-smoking medication. They were randomized to
 14 Bupropion versus placebo, and then they were
 15 followed up to see if that had any impact on
 16 their smoking cessation rates. I did another
 17 trial that took patients with acute coronary
 18 syndromes that were smokers, and the patients
 19 were randomized for Varenicline versus placebo,
 20 again to see the impact on smoking cessation
 21 rates. I am involved in a trial which we are
 22 just starting now. It's been funded and we are
 23 just about to start randomizing with smokers
 24 being randomized to electronic cigarettes, with
 25 or without nicotine, as well as counselling to

1 see if that has an impact on smoking cessation
 2 rates.

3 **Q. Have you ever conducted a clinical
 4 trial about a medical device?**

5 **A. I don't think that I have ever been
 6 a lead investigator of a clinical trial where
 7 patients were randomized to a medical device
 8 versus not.**

9 **Q. Have you ever been an investigator
 10 in such a trial, even if you were not the lead
 11 investigator?**

12 **A. No. As you know, I routinely
 13 implant stents. Some of those -- some of those
 14 patients that received stents were collected in
 15 the form of a registry, but again I was not the
 16 lead investigator. I have also been involved in
 17 other clinical trials as a collaborator, again
 18 not as a lead investigator, for example, drug
 19 trials where patients were randomized for one
 20 drug versus another.**

21 **Q. Other than the experience with
 22 clinical trials or registries actually and
 23 stents, have you ever been involved as an
 24 investigator in a clinical trial involving a
 25 medical device?**

1 **A. Well, I have never been the lead
 2 investigator for a clinical trial involving
 3 medical devices, but I actually have quite a
 4 number of publications related to medical
 5 devices. One of the areas that I am involved
 6 with and interested in research-wise is
 7 technology assessments. So we have done
 8 technology assessments on different medical
 9 devices over the years, done some cost-effective
 10 analyses as well involving medical devices.**

11 **Q. Have you ever published anything
 12 concerning inferior vena cava filters?**

13 **A. No, I have not.**

14 **Q. Prior to your retention as an expert
 15 in this litigation, have you ever had any
 16 professional involvement with inferior vena cava
 17 filters?**

18 **MR. ROTMAN: Objection.**

19 **THE WITNESS: Well, sir, although I
 20 am an interventional cardiologist I am also a
 21 general cardiologist, so I am routinely involved
 22 in the diagnosis of patients with deep vein
 23 thrombosis and pulmonary emboli. And some of
 24 those patients I refer on to thrombosis experts
 25 and eventually those patients, some of them get**

1 inferior vena cava filters. And also in the
 2 cath. lab I am doing angiograms. Our centre is a
 3 centre of excellence for pulmonary hypertension,
 4 so I do a lot of right and left heart cath's. So
 5 the left heart cath's are the ones where we are
 6 putting stents in the coronaries. But I am
 7 routinely putting catheters in the inferior vena
 8 cava to go into the right atrium, the right
 9 ventricle pulmonary arteries to measure pressures
 10 and do pulmonary angiograms. As well I do at our
 11 hospital -- it's usually done by radiologists at
 12 other hospitals. But I would like to say that
 13 some of my patients that come to the cath lab
 14 have inferior vena cava filters, so I cannot put
 15 a catheter into the inferior vena cava to do my
 16 studies, so then I would have to go through the
 17 superior vena cava, through a jugular vein to do
 18 the studies.

19 **BY MR. NORTH:**

20 **Q. Is it fair to say that your
 21 professional involvement with inferior vena cava
 22 filters has been observing the filters in your
 23 patients or treating patients that ultimately
 24 would receive the filter?**

25 **MR. ROTMAN: Objection.**

1 THE WITNESS: Yes. I think the
 2 majority of my exposure to inferior vena cava
 3 filters is in situations of diagnosing patients
 4 who eventually require filters or my patients who
 5 have filters in place, yes.

6 BY MR. NORTH:

7 Q. But in your practice you are not the
 8 person that makes the recommendation for an
 9 inferior vena cava filter to be implanted in a
 10 patient; correct?

11 A. Typically not, but that would happen
 12 occasionally that it was a clear-cut case of a
 13 patient who needed a filter and I would refer
 14 them directly, but it would be unusual.

15 Q. Can you recall the last time you
 16 referred a patient to have an inferior vena cava
 17 filters implanted?

18 A. Well, I was just rounding in CCU two
 19 weeks ago where we had a patient who came in with
 20 a DVT pulmonary emboli and had a pericardial
 21 infusion which needed to be drained, and they
 22 needed anti-coagulation, but they are at high
 23 risk because of the drain. So I think this
 24 patient will ultimately get an inferior vena cava
 25 filter. I did not refer them for it. I think

1 they were not quite ready for it. And this would
 2 be a case where if the drain had been pulled from
 3 the pericardial sac we would have referred
 4 directly for an inferior vena cava filter.

5 Q. But that has not happened with that
 6 particular case as yet?

7 A. Well, I don't know after I left the
 8 CCU whether that's happened yet or not.

9 BY THE VIDEOGRAPHER: Going off the
 10 record at 10:28 a.m.

11 BY THE VIDEOGRAPHER: Going back on
 12 the record at 10:48 a.m.

13 BY MR. NORTH:

14 Q. Doctor, before we took that break,
 15 we were talking about your involvement as a
 16 physician in referrals of patients of implants of
 17 inferior vena cava filters, and I believe you
 18 told us you had done that before.

19 A. Yes.

20 Q. So do you believe that inferior vena
 21 cava filters are an appropriate treatment in some
 22 patients?

23 MR. ROTMAN: Objection.

24 THE WITNESS: I think that they are
 25 -- there is a group of patients who either cannot

1 be anticoagulated or they are resistant to an
 2 anticoagulation, and they would benefit from
 3 inferior vena cava filters.

4 BY MR. NORTH:

5 Q. And you have made that determination
 6 for some of your patients over the years?

7 A. Yes.

8 Q. Do you make any recommendations when
 9 you are referring a patient for an inferior vena
 10 cava filter between permanent filters and
 11 retrievable filters?

12 MR. ROTMAN: Objection. Can I hear
 13 the question again?

14 THE WITNESS: Yes.

15 QUESTION WAS READ BACK.

16 MR. ROTMAN: Same objection.

17 THE WITNESS: No, I mean, I am
 18 obviously aware of the differences between the
 19 retrievables and the permanents, but I am
 20 typically not giving recommendation about which
 21 filters should be put in. In our hospital we
 22 fortunately have a thrombosis service that
 23 usually takes care of these patients, so they are
 24 typically the ones that would make those
 25 determinations in conjunction with the

1 interventional radiologists.

2 BY MR. NORTH:

3 Q. So you defer to those fellow
 4 professionals to make that determination?

5 A. Typically; yes, I do.

6 Q. Doctor, how much do you charge for
 7 your consulting work for your work as an expert
 8 witness?

9 A. I charge \$700 an hour.

10 Q. Does that charge differ depending on
 11 whether you are simply reviewing materials versus
 12 giving testimony?

13 A. It's \$700 an hour for reviewing
 14 materials and teleconferences and meetings. I
 15 charge \$1,100 an hour for depositions and
 16 testimony.

17 Q. Do you charge for your travel when
 18 you travel to give testimony?

19 A. Well, I haven't done that for a long
 20 time, so I have to go back and look and see what
 21 I did. If I am not mistaken, I had sort of a
 22 minimum charge.

23 Q. Do you have a minimum number of
 24 hours that you charge for a deposition?

25 A. No.

1 Q. Do you have a minimum number of
 2 hours that you charge for a day of trial
 3 testimony?
 4 A. Again, I haven't done this in a
 5 while, so I would have to go back and see. If I
 6 was to take a day off of work and travel
 7 somewhere and only testify for one hour, I
 8 probably would have to have some kind of minimum.

9 Q. Can you estimate for me how many
 10 cases you have presently that you are consulting
 11 on on litigation?

12 A. I mean, I guess I have to say, I
 13 don't know if --

14 MR. ROTMAN: So the question, just
 15 so that we are staying clear of areas where
 16 information is protected from Discovery, the
 17 question is just for a number, not to identify
 18 anything beyond a number. So can you re-read the
 19 question?

20 QUESTION WAS READ BACK.

21 THE WITNESS: I believe the answer
 22 to that would be two, including this one.

23 BY MR. NORTH:

24 Q. Okay. Is it fair to say that
 25 litigation consulting is a small percentage of

1 meetings with Counsel?

2 A. Yes, I did.

3 Q. And who was that with and when was
 4 that?

5 A. I met yesterday afternoon with these
 6 three gentlemen.

7 Q. For the record, Mr. Rotman and Mr.
 8 Mankoff and Mr. Johnson?

9 A. That's correct. And then last week
 10 I also met for half a day with Mr. Rotman and Mr.
 11 Mankoff.

12 Q. On how many prior occasions -- well,
 13 have you ever met with Mr. Lopez regarding filter
 14 litigation?

15 A. I have met with Mr. Lopez. I don't
 16 recall how many times. I think maybe twice.

17 Q. Were both of those occasions here in
 18 Montreal?

19 A. Yes.

20 Q. Prior to the meeting last week, had
 21 you ever met with Mr. Rotman or Mr. Mankoff
 22 before?

23 A. Not about this Austin case.

24 Q. Prior to yesterday had you ever met
 25 with Mr. Johnson before?

1 your professional time?
 2 A. Yes, it's the case.
 3 Q. Would you say less than ten percent?
 4 A. Yes, I would.
 5 Q. And the same would be true as far as
 6 income. Income generated from litigation
 7 consulting is a small percentage of your income?

8 A. I am not sure -- how does that
 9 differ from your previous question.

10 Q. Well, time versus income?

11 A. I see. Well, both income and the
 12 time is very small compared to my regular job.

13 Q. Under ten percent in both instances?

14 A. Yes, I think that's correct. I am
 15 sure that's correct.

16 Q. Who were you first contacted by
 17 concerning filter litigation?

18 A. If I am not mistaken, it was Ramon
 19 Lopez.

20 Q. And how long ago were you contacted
 21 by Mr. Lopez?

22 A. If I am not mistaken, that would be
 23 2013.

24 Q. Have you had -- well, in preparation
 25 for the deposition today, did you have any

1 A. Again, not related to this Austin
 2 case.

3 Q. Can you estimate for us how much
 4 time you have spent in preparing and working with
 5 the Austin case?

6 A. Well, I think I -- you have copies
 7 of my invoices.

8 Q. Your invoices tell us nothing.
 9 Everything is blacked out.

10 MR. ROTMAN: For the record, that's
 11 inaccurate. You are asking for the amount of
 12 time, and that is not blacked out on the
 13 invoices.

14 MR. NORTH: We cannot tell. Well,
 15 we cannot tell from those invoices whether the
 16 time was spent with Austin or another case. So
 17 no, they do not tell us.

18 BY MR. NORTH:

19 Q. Can you estimate for us how many
 20 hours you have spent on the Austin case?

21 A. I think that -- at the time of that
 22 invoice I think it was approximately 20 hours and
 23 then since then perhaps 30 hours or less.

24 Q. So you are estimating 50 hours on
 25 this case?

1 A. Yes.

2 MR. NORTH: And for the record,
3 Counsel, we are going to reserve the right to
4 reconvene this deposition because of what we
5 consider a frivolous redaction of invoices and --
6 once we challenge that with the Court.

7 MR. ROTMAN: We reserve the right to
8 object.

9 BY MR. NORTH:

10 Q. What Attorneys retained you in the
11 litigation against Bayer?

12 A. I don't recall exactly. I would
13 have to refer back to my document here.

14 Q. There is a mention on the listing of
15 a Ronca under Lawyers.

16 A. Yes, I recall Jim Ronca. I don't
17 recall if there were any other Lawyers that were
18 involved.

19 Q. Have you ever worked with any of the
20 Lawyers you are working with before -- or working
21 with with regard to this Austin case, have you
22 worked with them on any previous litigation,
23 other than filter litigation?

24 A. I don't believe I worked with Mr.
25 Mankoff or Mr. Rotman before. Joe Johnson, I

1 a different section, if I am not mistaken.

2 Q. In 1994 and 1995 you have listed an
3 interventional fellow at Cleveland Clinic. Could
4 you tell me what that was about?

5 A. Yes. I mean, after medical school I
6 came to Montreal and did my internal medicine at
7 McGill and I also did a masters of public health
8 at Harvard and I was overseas for a year, but
9 then I did my cardiology training in San
10 Francisco, so I had matched in an academic
11 cardiology program. So it was two years of
12 research and two years of clinical cardiology,
13 and then finally one year interventional
14 cardiology fellowship at the Cleveland Clinic.
15 So that was July '94 to July '95, and that was
16 learning how to do angioplasty.

17 Q. Doctor, do you know what the
18 predicted annual rate of occurrence of pulmonary
19 emboli each year is in either Canada or the
20 United States?

21 MR. ROTMAN: Objection.

22 THE WITNESS: Well, I didn't review
23 that literature in preparation for this
24 deposition, so I would be reluctant to give you a
25 number.

1 believe we met before. I don't recall if that
2 actually led to litigation or not, and I don't
3 recall what the topic was either.

4 Q. Well, prior to your involvement in
5 the filter litigation with Mr. Lopez, had you
6 worked with him on any consulting matter?

7 A. Not to my recollection. But for
8 example, the Aprotinin, there were often many
9 Lawyers involved, so I don't recall who was
10 involved.

11 Q. In looking through your c.v., it
12 appears you obtained your medical degree from the
13 University of Rochester School of Medicine.

14 A. Yes, that's correct. I graduated
15 there in 1985.

16 Q. And your c.v. seems to suggest you
17 took a break from your studies.

18 A. While I was I medical school; yes, I
19 did. I took a year off.

20 Q. What did you do during that year
21 off?

22 A. I went to Israel for the year, and
23 then I spent six months in an intensive Hebrew
24 course and then I did research in a hospital in
25 Jerusalem. I think it's listed on my c.v. under

1 BY MR. NORTH:

2 Q. I believe you mentioned earlier that
3 there is a thrombo -- what did you call it?

4 A. Thrombosis.

5 Q. Thrombosis group in your hospital.
6 As a consequence, are you not the primary
7 treating physician of patients that are being
8 treated for pulmonary embolism?

9 A. I am the primary treater for some
10 patients and other patients are primarily treated
11 by the thrombosis team. Oftentimes they will
12 initiate therapy and then the patient will be
13 followed by me in clinic. So we have all
14 different variations there.

15 Q. Do you generally prescribe
16 anticoagulants as a part of your practice?

17 A. Yes, I do.

18 Q. Which ones do you generally or
19 predominantly prescribe?

20 A. Well, I prescribe Coumadin. I
21 prescribe novel oral anticoagulants like
22 Apixaban, Rivaroxaban.

23 Q. What do you mean by the use of the
24 word "novel" in that context?

25 A. Well, "novel" is a bit of a

1 misnomer. They started calling them novel when
 2 they first came out. They have been out for a
 3 while. They have been out long enough now that
 4 they are no longer novel, but we still use that
 5 term. They are also known as NOACS. N-O-A-C-S.
 6 These are alternatives to coumadin that can be
 7 taken orally and they don't require any medical
 8 monitoring in terms of blood testing like
 9 coumadin does.

10 Q. Have you ever had a patient where
 11 you believe an inferior vena cava filter actually
 12 saved the patient's life?

13 A. Not to my recollection, but
 14 oftentimes it might have been and you would not
 15 realize it.

16 Q. Have you ever had a patient that has
 17 suffered from an adverse event related to an IVC
 18 filter?

19 A. In my personal practice I do not
 20 believe I have ever had anybody with a
 21 complication that I have been made aware of.

22 Q. You seem to be limiting that to your
 23 personal practice. Have you had contact with
 24 patients that you know had adverse events related
 25 to IVC filters?

1 A. I am aware of complications from the
 2 medical literature, but I have not seen a patient
 3 directly that had a complication related to IVC
 4 filters.

5 Q. So you have never had personal
 6 contact with a patient who has had a fracture or
 7 migration of an IVC filter, to your knowledge?

8 MR. JOHNSON: Objection.

9 THE WITNESS: Not to my
 10 recollection.

11 BY MR. NORTH:

12 Q. What is the average size of an
 13 individual's IVC?

14 MR. ROTMAN: Objection.

15 THE WITNESS: I don't know what the
 16 average size is of an individual's inferior vena
 17 cava, but I know that the Bard filters were
 18 indicated for patients with an inferior vena cava
 19 diameter of 28 millimetres or less.

20 BY MR. NORTH:

21 Q. Do you have any information about
 22 the range of sizes of the typical human IVC?

23 A. I did not look at that literature.
 24 I mean I didn't look at the literature regarding
 25 IVC sizes. I also know it's a dynamic structure,

1 so depending on whether a patient coughs or their
 2 position changes, whether they are -- I am very
 3 aware -- in cardiology we are very aware of
 4 patients, if they are dehydrated or that the
 5 inferior vena cava is smaller, or if they are in
 6 right heart failure it's dilated. If they have
 7 an acute pulmonary embolus it's dilated. So we
 8 are very aware of the diameter changing. That's
 9 why we use that clinically, but in terms of
 10 measuring the actual diameter, that's not
 11 typically what we do.

12 Q. Do you know what sort of
 13 complication, if any, Ms. Austin alleges?

14 MR. ROTMAN: Objection.

15 THE WITNESS: I believe that she had
 16 a filter tip, and perforation and fracture,
 17 migration of pieces of the filter into -- if I am
 18 not mistaken, into the pancreas and I think into
 19 the spine as well.

20 BY MR. NORTH:

21 Q. Have you reviewed any of her medical
 22 records?

23 A. I have not reviewed any of her
 24 medical records. I believe I saw a few lines
 25 describing her medical case.

1 Q. You have not spoken with any of her
 2 treating physicians, have you?

3 A. No, I have not spoken to any of her
 4 treating physicians.

5 Q. Do you know whether her filter has
 6 been removed?

7 A. If I am not mistaken, her filter has
 8 been removed. But again, I didn't have access to
 9 any of her direct medical records.

10 Q. Do you know what model filter she
 11 had placed?

12 A. I believe she had a G2 filter that
 13 was placed.

14 Q. Before your involvement in the
 15 filter litigation, were you aware of Bard filters
 16 specifically?

17 A. I had heard of them. I had heard of
 18 the various filters. I was not -- I mean, I
 19 peripherally was aware of the literature, but not
 20 to the extent that I am now.

21 Q. Prior to your involvement in filter
 22 litigation, were you aware of the differences
 23 between the Recovery filter and the G2?

24 A. I knew the names. I wasn't aware of
 25 the exact differences between them.

1 Q. Before your involvement in the
 2 filter litigation, were you aware of any
 3 differences between the G2 and later generation
 4 Bard filters?

5 A. Again, I was aware of the names of
 6 the filters, but not the specific differences
 7 between the different generations.

8 Q. Prior to your involvement in this
 9 litigation, had you ever heard of the Simon
 10 Nitinol filter?

11 A. I had heard of that.

12 Q. Do you know whether you have had
 13 involvement with any patient that had a Simon
 14 Nitinol filter placed?

15 A. I can't say that. Again in
 16 cardiology, is there a filter: Yes or no. So I
 17 wasn't aware of the different models that were
 18 put in.

19 Q. Do you know whether the
 20 interventional radiology group in your hospital
 21 implants Simon Nitinol filters?

22 A. I do not know that.

23 Q. Do you know whether they have in the
 24 past?

25 A. Again, I am not aware of what models

1 Q. Have you ever worked with the United
 2 States Food and Drug Administration?

3 A. Well, I have never worked for the
 4 FDA. I have had some communications with the FDA
 5 over one of the clinical trials that I did. They
 6 called me and I gave them information.

7 Q. Other than communications --

8 MR. ROTMAN: Are you done with the
 9 answer?

10 MR. NORTH: Sorry?

11 MR. ROTMAN: Were you done with the
 12 answer?

13 THE WITNESS: I have also done
 14 submissions to the FDA for some of our clinical
 15 trials to be done in the U.S. as well as Canada.

16 BY MR. NORTH:

17 Q. You haven't done any submissions to
 18 the FDA seeking approval for a pharmaceutical or
 19 medical device, have you?

20 A. I haven't done any seeking approval
 21 for a medical device. For drugs I -- again, I
 22 went to the FDA to seek approval to do a clinical
 23 trial with a non-label indication, but it was not
 24 for a new drug.

25 Q. Have you ever done any work with

1 they have placed. I am confident they have
 2 placed more than one model and they have over the
 3 years, but I can't tell you exactly which ones.

4 Q. So you do not know one way or
 5 another whether the interventional radiology
 6 group at your hospital either has placed in the
 7 past or presently places Bard filters?

8 A. No, I can't say that, that I know
 9 with assurance that they have placed Bard
 10 filters. I would suspect that they have but I
 11 don't know for sure.

12 Q. We can agree you are not an
 13 engineer; correct?

14 A. I am not an engineer.

15 Q. And you are not a metallurgist?

16 A. I have no training of metallurgy.

17 Q. Have you ever been involved in the
 18 design of a medical device?

19 A. I can't say that I have been
 20 directly involved in the design of a medical
 21 device.

22 Q. Have you ever worked with the United
 23 States Food and Drug Administration?

24 A. I haven't worked with them. Can you
 25 repeat that question, please?

1 Health Canada?

2 A. Yes, I have done some work with
 3 Health Canada, again in the same context of
 4 getting approval to do clinical trials.

5 Q. Would you consider yourself an
 6 expert in the regulations of the FDA or Health
 7 Canada?

8 A. No, I can't construe that I am an
 9 expert with regulations for either the FDA or
 10 Health Canada.

11 Q. Would you consider yourself an
 12 expert in pharmacovigilance?

13 MR. ROTMAN: Objection.

14 THE WITNESS: Can you repeat that
 15 question, please?

16 BY MR. NORTH:

17 Q. Would you consider yourself an
 18 expert in pharmacovigilance?

19 A. Well, although I wouldn't consider
 20 myself an expert in pharmacovigilance, I believe
 21 I have a lot of training in that area, certainly
 22 much more so than the typical clinician. I mean,
 23 a lot of the research I do involves drugs, and
 24 drug complications and database research. So
 25 although I can't say that I am an expert in

1 pharmacovigilance, I am pretty comfortable with
2 many of the issues in that area.

3 Q. In your work in the litigation
4 against Bayer you were furnished and you reviewed
5 some internal Bayer documents, didn't you?

6 A. Yes, I believe I did.

7 Q. And in this litigation you have been
8 furnished and reviewed some internal Bard
9 documents. Is that correct?

10 A. Yes, I have been given some internal
11 Bard documents for review.

12 Q. Other than your involvement in these
13 two litigations, the Bayer litigation and the
14 Bard filter litigation, have you ever had an
15 occasion, as a part of your professional work, to
16 read and analyse internal documents from a
17 pharmaceutical or medical device manufacturer?

18 A. I don't recall exactly, but it's
19 possible that there were one or two other
20 situations where I saw internal documents from a
21 company that was more an exploratory phase and
22 never reached deposition or testimony. I am not
23 even sure whether the litigation was pursued.
24 But again, this is recollection.

25 Q. And what you are talking about

1 pharmaceutical company but a device company. I
2 am not sure that I have seen internal documents
3 in other situations other than that.

4 Q. I mean, you don't look at internal
5 corporate documents as a part of your work as a
6 cardiologist at Jewish Hospital, do you?

7 A. That's not a typical part of my --
8 no. If I did, it would be very small, but I am
9 not sure that I see any.

10 Q. And you don't consider yourself an
11 expert in corporate ethics, do you?

12 A. No, I can't say that I am an expert
13 in corporate ethics.

14 Q. Do you know what division of the FDA
15 regulates IVC filters?

16 A. I would have to -- I would have to
17 go back and review my documents to tell you the
18 answer to that.

19 Q. So as you sit here today you can't
20 tell me?

21 A. I don't recall.

22 Q. Do you know how the FDA defines a
23 safety signal?

24 MR. JOHNSON: Form.

25 THE WITNESS: Again, I would have to

1 there, the other instance that may have happened,
2 that would have been litigation-related; correct?

3 A. I think there were situations where
4 there is a possibility of litigation or where
5 they were exploring the possibility of
6 litigation, but I don't know if it actually
7 proceeded or not. I am not even sure that I saw
8 internal documents at that time.

9 Q. Well, is it fair to say you have not
10 had occasion to review internal manufacturer
11 documents as part of your professional work
12 outside of your consulting practice?

13 MR. ROTMAN: Objection.

14 THE WITNESS: It's unusual for me to
15 review internal document from companies. I do --
16 as I had mentioned earlier, I am doing a clinical
17 trial on electronic cigarettes and, as part of
18 that trial, we had to go through Health Canada
19 and we are working with a company in the U.S.
20 that produces the electronic cigarettes. So I
21 have had access to some of their internal
22 documents and some of their internal testing that
23 had to be provided to Health Canada. So in that
24 context I had seen some documents -- internal
25 documents from a pharmaceutical -- not a

1 go back to their documents or website in order to
2 give you the exact definition they use.

3 BY MR. NORTH:

4 Q. Have you ever seen in the past, that
5 you can recall, documents or regulations where
6 the FDA has defined a safety signal?

7 A. I don't recall offhand. It's quite
8 possible that I have seen that.

9 Q. Have you ever made a report to the
10 MAUDE database at the United States FDA
11 concerning an incident or complication involving
12 a medical device?

13 A. I have not made a direct submission
14 to the MAUDE database myself.

15 Q. Have you -- well, have you ever
16 directed somebody that works with you or for you
17 to make such a report?

18 A. I don't recall ever doing that.

19 Q. Have you ever reported a
20 complication with a medical device to Health
21 Canada?

22 A. Sorry? Can you repeat that
23 question, please?

24 Q. Have you ever reported a
25 complication involving a medical device to Health

1 Canada?

2 A. Offhand I don't recall doing that.
 3 I was involved when I was training here in
 4 Montreal, being involved in a report -- there was
 5 -- this is not a medical device, but there was an
 6 epidemic from mussel poisoning, so that was a
 7 reportable event that I was involved in.

8 Q. Other than that, can you recall
 9 making a report to Health Canada regarding a
 10 complication involving a medical device?

11 A. Offhand I don't recall doing that.

12 Q. Are you aware of the fact that
 13 Health Canada recently issued a public health
 14 notification regarding inferior vena cava
 15 filters?

16 A. Yes, I did see that. That was
 17 circulated at McGill.

18 Q. Did you have any consultation with
 19 Health Canada about that issue prior to the
 20 release of that notice?

21 MR. ROTMAN: Can I have the question
 22 again?

23 QUESTION WAS READ BACK.

24 THE WITNESS: Do you mean have I
 25 received other notices from Health Canada?

1 BY MR. NORTH:

2 Q. No. I am asking concerning the
 3 notice regarding IVC filters. Did you consult
 4 with Health Canada about that topic prior to
 5 their issuance of that notice?

6 A. No, I have not had any contact with
 7 Health Canada about IVC filters.

8 Q. You are not an expert in medical
 9 device labelling, are you?

10 A. No, I cannot say that I am.

11 Q. When you implant medical devices do
 12 you generally review the instructions for use?

13 A. I typically do when I first use it,
 14 yes.

15 Q. You have no education or training
 16 specific to medical device labelling, do you?

17 A. No, I don't have any specific
 18 training.

19 Q. You have never drafted the label for
 20 a medical device?

21 A. No, I don't believe I have been
 22 involved in drafting labelling for medical
 23 devices.

24 Q. And have you ever worked directly
 25 for a medical device company as a consultant?

1 A. I don't believe that I have been a
 2 consultant to a medical device company, but I
 3 have been members of advisory boards for
 4 pharmaceutical companies. It's possible that I
 5 was -- you know, attended one or two meetings for
 6 advisory boards for medical devices, but again I
 7 don't recall.

8 Q. Have you ever had any contact with
 9 Bard prior to your involvement in this
 10 litigation?

11 A. Not to my knowledge.

12 Q. What sort of advisory boards for
 13 pharmaceutical companies have you served on?

14 A. Well, the advisory boards that I
 15 have served on have been in very limited
 16 capacities. So these are typically when they
 17 gather a small group of physicians together that
 18 use a particular medication to get feedback on
 19 whether the medication is effective, safe,
 20 marketing issues. But really I would say I have
 21 done that only on a handful of occasions.

22 Q. Do you remember which pharmaceutical
 23 companies?

24 A. I was on the advisory board with
 25 Pfizer for Varenicline for a couple of years

1 which involved, I believe, a yearly meeting. I
 2 probably went to two meetings. And then I, you
 3 know, decided to get off the board. I have been
 4 to a couple of advisory board meetings recently
 5 which I believe was with Bayer regarding one of
 6 their anticoagulants, but really I would say I
 7 have been to a very small number of advisory
 8 board meetings. These are not ongoing
 9 commitments.

10 Q. Do you know Dr. Betensky who is
 11 another expert in this case?

12 MR. ROTMAN: Objection.

13 THE WITNESS: I have never met her
 14 personally. I know of her.

15 BY MR. NORTH:

16 Q. Have you spoken with her on the
 17 phone?

18 A. I have.

19 Q. On how many occasions?

20 A. I believe I spoke with her twice.

21 Q. Have you reviewed her deposition
 22 taken in the Austin case?

23 A. I don't believe I reviewed her
 24 deposition.

25 Q. Have you reviewed any of her

1 calculations?

2 A. I have reviewed her calculations and
3 was provided with a spreadsheet that I believe
4 she prepared.

5 Q. Did you try to recreate her
6 calculations?

7 MR. ROTMAN: Objection.

8 THE WITNESS: I am sorry. Can you
9 repeat that?

10 BY MR. NORTH:

11 Q. Did you attempt to recreate her
12 calculations?

13 A. Well, I had her spreadsheet, and the
14 purpose of these two telephone calls were for me
15 to ask questions about her spreadsheet and how
16 she generated these numbers so I could understand
17 the types of calculations she did. So I -- I am
18 quite confident I understand how those numbers
19 were generated.

20 Q. That was not my question, Doctor.
21 Did you independently recreate her calculations?

22 MR. ROTMAN: Same objection.

23 THE WITNESS: I did not
24 independently recreate her calculations but I am
25 quite confident I understand how they were done,

1 some of my views.

2 Q. Can you tell me what parts of this
3 you asked to be amended or revised?

4 A. Well, I can't recall exactly, but I
5 recall specifically on page two much earlier
6 that, although I have training in biostatistics
7 and I use them on a daily basis and am very
8 comfortable with them and work with
9 biostatisticians, I would not call myself a
10 biostatistician, so I thought that that should be
11 removed. And I thought that -- I call myself a
12 clinical epidemiologist rather than a
13 epidemiologist. A clinical epidemiologist, I
14 believe, works on clinical issues and uses
15 epidemiological methods to look at clinical
16 issues, whereas epidemiologists typically are
17 more dealing with traditional epidemiology with
18 risk factors which are much closer to the patient
19 than that. And also in that same section I asked
20 to remove the sections about rates of pulmonary
21 embolism mortality rates because I didn't
22 specifically review that literature for this
23 case. So those are some of the things that I had
24 asked to be revised. I don't recall if that was
25 all of them.

1 and they were done appropriately.

2 BY MR. NORTH:

3 Q. Other than the calculations that you
4 showed us earlier concerning confidence levels
5 and sampling sizes for potential clinical trials,
6 those three pages of calculations, have you
7 performed any other calculations in this
8 litigation?

9 A. No, I don't believe I have.

10 Q. Let me hand you what's been marked
11 as Exhibit 7.

12 Exhibit 7 was marked for
13 identification.

14 BY MR. NORTH:

15 Q. Which is a Discovery Response filed
16 by the Plaintiffs in this case. Have you ever
17 seen that before?

18 A. I believe that I saw this document
19 previously, but I had asked it be amended, so I
20 believe there was another version of it after
21 this one.

22 Q. Turning to page six, that's where
23 the discussion -- the description of your view
24 begins; correct?

25 A. Yes, this is a section about my --

1 Q. It's fair to say that the
2 descriptions or summaries of your testimony in
3 this document were not originally drafted by you;
4 correct?

5 A. Which sections are you referring to?

6 Q. Both sections that mention you, the
7 one on page two and the one beginning on page
8 six.

9 A. I think that these sections were
10 drafted in consultation with me and also with
11 reference to my c.v.

12 Q. That's not my question. Did you
13 personally put pen to paper for the original
14 drafts of these?

15 A. I did not put pen to paper to write
16 these sections.

17 Q. I guess in this age I shouldn't
18 limit it to pen and paper. You didn't personally
19 type the initial draft of these; right?

20 A. I don't believe that I did.

21 Q. Do you -- have you ever seen a
22 version of the paragraph about you on page two
23 that was revised in accordance with your
24 requests?

25 A. Yes, I have.

1 **Q. Did you make any revisions to the**
 2 **section that begins on page six?**
 3 **A. I don't recall if I had asked this**
 4 **to be revised. Certainly, in re-reading this,**
 5 **there is clearly a typo on the bottom of page six**
 6 **where it says he is expected to testify that the**
 7 **Asch study and Everest study on retrievability**
 8 **were safety or efficacy studies -- it should be**
 9 **that they were not safety or efficacy studies and**
 10 **they were not designed to function as safety or**
 11 **efficacy studies, so there is missing a "not"**
 12 **there, although I don't recall if I had actually**
 13 **asked that to be revised.**

14 MR. ROTMAN: I don't think he is
 15 done reading the rest of the section. There may
 16 be more.

17 THE WITNESS: That's all I recall at
 18 this time for that section.

19 BY MR. NORTH:

20 **Q. In the litigation involving the**
 21 **Bayer drug, you prepared a lengthy expert report,**
 22 **didn't you?**

23 **A. Yes, I did.**

24 **Q. And you wrote that report yourself,**
 25 **didn't you?**

1 THE WITNESS: I am sorry. Can you
 2 repeat the question?

3 BY MR. NORTH:

4 **Q. Can you tell me generally what your**
 5 **opinions are in this case?**

6 **A. I can give you a couple of my**
 7 **general opinions, and then there will be a whole**
 8 **lot of specific opinions under that.**

9 **Q. Okay. Let's start there.**

10 **A. My general opinion is that there is**
 11 **a high rate of complications with both Recovery**
 12 **in the G2, G2 Express filter compared to the**
 13 **Simon Nitinol filter; that there are a variety of**
 14 **complications associated with these retrievable**
 15 **filters that are more common with them than their**
 16 **predicate device that was the SNF; further that**
 17 **there were multiple early safety signals with**
 18 **these devices and these safety signals include**
 19 **safety signals seen from the MAUDE database which**
 20 **is known internally to Bard. There was also an**
 21 **extensive medical literature documenting elevated**
 22 **complication rates with retrievable filters, and**
 23 **then there was also some Bard internal**
 24 **documentation about low migration resistance with**
 25 **the retrievables compared to the permanent. So**

1 **A. Yes, I prepared it myself.**

2 **Q. But for this particular case you**
 3 **have not prepared a report, have you?**

4 **A. No, I have not.**

5 **Q. Since you did not prepare a report**
 6 **and you did not initially draft this description**
 7 **of your testimony, could you list for me what**
 8 **your principal opinions are in the Austin case?**

9 MR. ROTMAN: Objection.

10 MR. JOHNSON: Objection.

11 THE WITNESS: I think that would be
 12 -- I mean, I could list some of my opinions. I
 13 have a large number of opinions. I haven't
 14 written them out. I am sure I would miss some.
 15 Could you ask me specifically about particular
 16 opinions?

17 BY MR. NORTH:

18 **Q. Doctor, you have not furnished a**
 19 **writing of your opinions that you drafted. We**
 20 **are entitled under the procedural rules to take**
 21 **this deposition and ask you your opinions. So my**
 22 **question to you is: Can you tell me generally**
 23 **what your opinions are in this case?**

24 MR. ROTMAN: Objection.

25 MR. MANKOFF: Objection.

1 **-- and I believe there was -- Bard had a**
 2 **consultant that brought these issues to the**
 3 **attention of Bard and that Bard --**

4 **Q. Doctor, I would ask you not to talk**
 5 **about this consultant. There is an agreement in**
 6 **this case that that is privileged and there are**
 7 **rulings in other cases that that is privileged,**
 8 **so I don't want that on the Record, a discussion**
 9 **of this consultant. You can continue.**

10 MR. MANKOFF: There is a reference
 11 to the consultant in the HHE.

12 THE WITNESS: Yes, that's what I am
 13 referring to.

14 BY MR. NORTH:

15 **Q. Okay. What that understanding, yes.**

16 **A. Okay. So I am referring to that HHE**
 17 **which refers to the consultant's findings, that**
 18 **there were complication rates on the order of**
 19 **four or five times more common among Recovery**
 20 **filters compared to the predicate device.**

21 **Q. Okay. Continue.**

22 **A. So my opinion is that Bard -- it was**
 23 **their responsibility to do large safety and**
 24 **efficacy studies in order to address these**
 25 **concerns and that these safety studies were never**

1 done. I believe that Bard recognized that there
 2 were increased complications with Recovery. They
 3 had -- I don't recall the exact term, but they
 4 had a crisis or a crisis evaluation plan. There
 5 was a hold put on -- a commercial hold for a
 6 short while with Recovery, but then the G2 was
 7 developed to overcome the complications
 8 associated with Recovery, and so Recovery was
 9 removed from the market and G2 was put on the
 10 market, again without large safety and efficacy
 11 studies. And again, there was data from the
 12 MAUDE database and from migration testing, from
 13 medical literature that there were high
 14 complication rates associated with G2. So again
 15 the device was redesigned and released as another
 16 iteration of device. So I guess my overall
 17 opinion is that there are increased complication
 18 rates associated with retrievable devices
 19 compared to the predicate device. There were
 20 signals from at least three different lines which
 21 suggested this, and yet the company did not
 22 pursue looking at these safety signals as they
 23 should have.

24 Q. Okay. The first thing you told me --

25 MR. ROTMAN: Can you just make sure

1 and making determinations as to what the company
 2 knew or did not know?

3 MR. MANKOFF: Form.

4 MR. ROTMAN: Objection.

5 THE WITNESS: Well, I don't have
 6 specific training looking at company documents
 7 and identifying what the company knows or doesn't
 8 know, but I will say first of all, as a clinician
 9 who puts devices in patients and as a clinician
 10 who takes care of patients with these devices
 11 implanted, if the kind of information I was
 12 seeing in the company documents was not provided
 13 to me I would be very unhappy. I think that --
 14 if I or someone in my family had a device
 15 implanted and within the company documents they
 16 were reporting rates, you know, four times
 17 greater of complications than another device, I
 18 would want to know about it. I wouldn't want
 19 that device in me or in my family member.
 20 Certainly as a clinician taking care of those
 21 patients, that would be very relevant information
 22 for me to know. So -- and then I think that you

1 he was done with his answer?

2 THE WITNESS: Yes, I guess I would
 3 like to add to that, which is that I think that
 4 -- from their internal documents it was clear
 5 that Bard recognized that there were elevated
 6 complication rates that were alarming or
 7 concerning and they were concerned that
 8 physicians were stopping to use their device and
 9 that they were -- I mean, that they had reports
 10 of multiple interventional radiologists who were
 11 stopping to use Bard devices. So there were some
 12 instructions given to the sales team how to -- I
 13 would call it spin control, but to put this in
 14 context, and they were comparing the MAUDE rates
 15 to the rates in the Grassi article, which really
 16 is comparing apples and oranges which I think is
 17 an inappropriate comparison and misleading. I am
 18 looking through my list of opinions here. I
 19 think that's it for my general opinions. It's
 20 possible I missed a few.

21 BY MR. NORTH:

22 Q. Doctor, can you tell me anything
 23 specifically that you were taught in your
 24 training in medical school that gives you special
 25 expertise in reviewing Bard's company documents

 10 BY MR. NORTH:

11 Q. Doctor, one of the first things you
 12 told me is that you have the opinion that there
 13 was a high rate of complications with the
 14 Recovery filter and the G2 when compared with the
 15 Simon Nitinol filter; correct?

16 A. Yes, I believe that's what I said.

17 Q. And on what did you base that? On
 18 what data?

19

 13 [REDACTED]
 14 retrospective study of all the IVC filters that
 15 were placed in our institution. They published
 16 the paper and documented high rates of
 17 complications. Other studies were prospective
 18 studies, prospective registries, such as the Asch
 19 study or the -- what, I guess, you guys term the
 20 Everest study which the first author was Binkert,
 21 looking at G2. So there are a whole host of
 22 medical studies in the medical literature,
 23 looking at complication rates among the
 24 retrievable filters.

25 Q. Did the Asch -- -

1 MR. ROTMAN: Were you done?
 2 THE WITNESS: In addition to that
 3 there were also a large number of case reports of
 4 complications associated with IVC filters that
 5 appeared in the literature and while, you know,
 6 case reports on their own can't really tell you a
 7 rate of complication, they indicate that
 8 physicians were seeing complications that they
 9 had not seen before, and felt impelled to report
 10 them in the literature so other physicians would
 11 be aware of this. I -- I also read the
 12 deposition by Murray Asch, and I read his article
 13 where he was doing the retrievability study on
 14 Recovery filters and found that there were
 15 complications in his first 33 patients. He had
 16 two major complications that he found that he
 17 felt that he had been misled by the company and
 18 that he felt that the company was just using this
 19 -- was supposed to use this as a pilot study and
 20 that a further large study would be done
 21 afterwards.

22 MR. NORTH: I object to the
 23 responsiveness of the answer.

24 BY MR. NORTH:

25 Q. Are you finished?

1 A. I believe I am finished.
 2 Q. Can you name me some of these
 3 medical studies that you believe support this
 4 opinion that the complication rate of the
 5 Recovery filter and the G2 are higher than that
 6 the Simon Nitinol filter?
 7 A. I am sorry. Can you repeat that
 8 question, please?
 9 Q. Can you name me some of the medical
 10 studies that support your opinion that the
 11 complication rate of the Recovery filter and the
 12 G2 is higher than that of the Simon Nitinol
 13 filter?
 14 A. Well, there is a large number. I
 15 can name you a couple of them: The Kalva study.
 16 There is Nicholson. There is an Asch study.
 17 There is the Binkert study. So those are just a
 18 few of them.
 19 MR. ROTMAN: Can we take another
 20 break? Ask another question and take a break?
 21 MR. NORTH: Let me ask another
 22 question.
 23 BY MR. NORTH:
 24 Q. Were there any complications
 25 reported in the Binkert study?

1 A. Yes, there were.
 2 Q. Do you recall what those were?
 3 A. I would have to see a copy of it to
 4 refresh my memory.
 5 MR. NORTH: Okay. Let's take a
 6 break.
 7 BY THE VIDEOGRAPHER: Going off the
 8 record at 11:49 a.m.
 9 BY THE VIDEOGRAPHER: This begins
 10 disk number two in the deposition of Dr.
 11 Eisenberg. We are going back on the record at
 12 12:05 p.m.
 13 BY MR. NORTH:
 14 Q. Before we took that break we were
 15 talking about some of the medical literature, and
 16 you were listing for me some of those that you
 17 believe supported your opinion, and one of those
 18 you mentioned was a Nicholson article.
 19 A. Yes.
 20 Q. Did the Plaintiff's Attorneys
 21 provide you with the deposition that's been taken
 22 in filter litigation of Dr. Nicholson?
 23 A. I don't believe so.
 24 Q. Did they provide you with a copy of
 25 the clarification published regarding his

1 article?

2 A. I had seen that clarification on the
3 web.

4 Q. Are you familiar with any of the
5 criticisms of how he conducted that study?

6 MR. JOHNSON: Objection.

7 THE WITNESS: Well, I am -- I read
8 many papers in preparation for today, and I am
9 aware that every study has potential limitations.
10 Specifically for that study, you know, the
11 additional piece I read, I believe that was the
12 article that had an editorial connected to it by
13 Rita Redburn, if I am not mistaken, in the
14 Archives of Internal Medicine, but that didn't
15 really criticize the paper, as I recall.

16 Q. So the answer is you don't recall
17 any specific information about criticisms of this
18 study?

19 MR. JOHNSON: Form.

20 THE WITNESS: No, I do not recall
21 that. I think that in many medical journals, if
22 there is a paper it may be accompanied by an
23 editorial, and many times the editorialist will
24 put the paper in context but also discuss
25 potential limitations. But I didn't see anything

1 to that effect for the Nicholson paper.

2 BY MR. NORTH:

3 Q. Did you provide any meta analysis in
4 this case?

5 A. I did not do any pooling of data
6 from different studies in this case. I have done
7 many meta analyses in my research career, as you
8 can see from my cv, but I have not done a meta
9 analysis for this case.

10 Q. In this particular case all of the
11 company documents that you have reviewed were
12 furnished to you by the Plaintiff's Attorneys;
13 correct?

14 A. Well, are you talking about the Bard
15 internal documents?

16 Q. Right.

17 A. The Attorneys did provide me with a
18 whole list of Bard internal documents that was
19 shared in a Drop Box account. I actually picked
20 and chose documents to look at because there were
21 so many of them, so I can say that I didn't go
22 through all of them. I was given a large number,
23 and I looked at a variety of internal documents
24 from that, from that that I selected myself.

25 Q. But all of the internal documents

1 that you were given came from the Plaintiff's
2 Attorneys?

3 A. Yes. I would no other source of
4 getting internal Bard documents.

5 Q. Now, did the Plaintiff's Attorneys
6 provide you with the medical literature that you
7 reviewed?

8 A. They provided me with some of the
9 medical literature that I reviewed, and then I
10 did multiple searches on my own and identified
11 additional medical literature. I also looked
12 through the references of most articles and
13 identified further medical literature from those
14 articles, from the references.

15 Q. Prior to your retention as a
16 consultant in the filter litigation, had you ever
17 conducted an extensive research or review of the
18 medical literature related to IVC filters?

19 A. Well, as I said before, I do lots of
20 meta analyses and systematic reviews, so the
21 methodology that I used here is what I used in
22 many of my previous studies, but I had never done
23 this previously with inferior vena cava filters.

24 Q. Prior to your retention as a
25 consultant in this case, had you ever read the

1 Kalva article?

2 A. I don't believe so.

3 Q. What about the Nicholson article?

4 A. Nicholson I recall. I am pretty
5 sure I did see.

6 Q. What about the Binkert?

7 A. I am pretty sure I did not see that
8 previously.

9 Q. What about the Asch?

10 A. Also the Asch article probably I did
11 not see. Much of the literature in this area
12 appears in the interventional radiology
13 literature, and typically I am looking at the
14 cardiology literature, internal medicine
15 literature, New England Journal or JAMA. So most
16 of these articles are not appearing in those
17 types of journals.

18 Q. Just so it's clear for the record,
19 if I understand what you are saying, most of the
20 articles that you have reviewed regarding filters
21 for this litigation don't generally appear in the
22 periodicals that you routinely review as part of
23 your professional work?

24 A. I think that's mostly correct. I
25 mean, I do look at periodicals in other areas of

1 medicine besides cardiology and internal
 2 medicine, but I don't routinely review articles
 3 in the interventional radiology literature unless
 4 I have a particular issue that I am going there
 5 for.

6 Q. We were provided a list of materials
 7 you had relied upon yesterday. Did that include
 8 all of the articles that you have reviewed for
 9 this case?

10 A. Yes, I believe so.

11 Q. Did you review the medical
 12 literature concerning complication rates of other
 13 manufacturers' filters?

14 A. I read some articles that involved
 15 filters made by other companies. That was not my
 16 focus but that was -- as an example, in the
 17 Grassi article many of the references were from
 18 filters that were not Bard filters, and I looked
 19 at some of those references as well.

20 Q. Is it fair to say that you did not
 21 review -- comprehensively review the medical
 22 literature to determine how the complication
 23 rates with Bard filters compared to the
 24 complication rates with competitive filters?

25 A. I would say I did review some

1 can't say that I comprehensively reviewed that
 2 literature.

3 Q. And that would be true with regard
 4 to any of the complication modes, wouldn't it?
 5 Migration, tilt, penetration. You haven't done
 6 the comprehensive review of the literature to
 7 compare Bard filters with other manufacturers'
 8 filters?

9 A. Yes, I would -- you know, I would
 10 repeat what I just said was I have seen some of
 11 that literature, but I did not do a comprehensive
 12 review of Bard filters versus other company
 13 filters.

14 Q. Is it your opinion that the medical
 15 literature clearly establishes high complication
 16 rates for the Recovery and G2 filters?

17 A. I think that the totality of the
 18 evidence from the medical literature indicates
 19 that there is higher complication rates with
 20 Recovery and G2 versus the Simon Nitinol filter.
 21 There is clearly many studies out there
 22 documenting higher complication rates. The exact
 23 rates vary from study to study, but really the
 24 totality of the evidence from the medical
 25 literature demonstrates that there is a higher

1 articles that did those comparisons, but that was
 2 not my focus and I would not say I did a
 3 comprehensive review of that comparison.

4 Q. Well, it's my understanding that
 5 it's your opinion that the complication rate with
 6 the Recovery filter and the G2 filters was higher
 7 than the complication rate regarding the Simon
 8 Nitinol filter; correct?

9 A. Yes, that's one of my opinions.

10 Q. Have you done an assessment to see
 11 whether the fracture rate of the Recovery filter
 12 and G2 filter are higher than the Select filter?

13 A. I am sorry. Can you repeat that
 14 question, please?

15 Q. Have you done any assessment, as a
 16 part of your work, as to whether the fracture
 17 rate of the Bard filters is higher than that of
 18 the Select filter?

19 A. First of all, I haven't done any
 20 analyses of that sort. I have seen some articles
 21 looking at that, and one particular document I
 22 saw, which was a spreadsheet of complication
 23 rates of Select, and I believe it was a G2
 24 comparison, but there was only one comparison.
 25 So I have seen some data related to that, but I

1 complication rate.

2 Q. So would you agree that anyone that
 3 looked at the medical literature could determine
 4 that the Recovery filter and the G2 had higher
 5 complication rates.

6 MR. ROTMAN: Objection.

7 MR. BUSMAN: Objection.

8 QUESTION WAS READ BACK.

9 MR. ROTMAN: Same objection.

10 THE WITNESS: I am sorry. Could you
 11 repeat it one more time, please?

12 QUESTION WAS READ BACK.

13 THE WITNESS: I don't think you
 14 could say anyone could look at that literature,
 15 because a lay person, I don't think, is capable
 16 of reviewing the medical literature. I mean,
 17 they just don't know the terminology. They don't
 18 study methodology. They really wouldn't be able
 19 to sort that out, but I would say that any
 20 clinician, excluding like psychiatrists, for
 21 example, would be able to read the medical
 22 literature and identify that there are higher
 23 complication rates with Recovery and G2 versus
 24 the SNF.

25 BY MR. NORTH:

1 Q. You said there were multiple early
 2 safety signals with regard to these filters;
 3 correct?
 4 A. I believe I said that, yes.
 5 Q. And as one basis for that opinion
 6 you cited the MAUDE database. Is that correct?
 7 A. Yes, that's correct.
 8 Q. You did not conduct any independent
 9 review of the MAUDE database as part of your work
 10 in this litigation, did you?
 11 A. I did not conduct any analyses of
 12 the MAUDE database myself. I did see what the --
 13 [REDACTED]
 14 [REDACTED]
 15 [REDACTED]
 16 [REDACTED] In addition I, you know,
 17 spent a lot of time looking at the analyses done
 18 by Dr. Betensky, which is also MAUDE data, which
 19 I think very clearly demonstrates there is higher
 20 complication rates with Recovery and G2 versus
 21 the SNF. I did not do those analyses myself, but
 22 I did go through the spreadsheet and understand,
 23 I think, very well how the calculations were
 24 performed, and it was done according to the kind
 25 of standards that I would do if I were to do that

1 and accessed the MAUDE database?
 2 A. I have accessed the MAUDE database.
 3 Q. How many times?
 4 A. Probably once.
 5 Q. Was that as part of your work in
 6 this case?
 7 A. Yes. I wanted to go back and see
 8 what it looked like.
 9 Q. Did you read any of the FDA's
 10 discussions of the limitations of the MAUDE
 11 database?
 12 MR. ROTMAN: Objection.
 13 THE WITNESS: I believe that on the
 14 -- I don't recall where this document was, but I
 15 believe it was from the website itself that I
 16 read about potential limitations of the MAUDE
 17 database. It's possible it wasn't at that
 18 website, but I certainly have seen one or two
 19 documents describing the potential limitations of
 20 using the MAUDE database.
 21 BY MR. NORTH:
 22 Q. And what were those limitations, if
 23 you recall?
 24 A. Some of the -- well, I can't give
 25 you an exhaustive list, but some of the

1 type of analysis.
 2 Q. And prior to this litigation, your
 3 involvement in this litigation, had you ever had
 4 occasion to review the MAUDE database?
 5 A. What do you mean by "review the
 6 MAUDE database"?

7 Q. Conduct some sort of study, some
 8 sort of analysis of a complication frequency rate
 9 or anything of that nature?
 10 MR. ROTMAN: Objection.
 11 THE WITNESS: I am sorry. Could you
 12 repeat the question, please?
 13 BY MR. NORTH:
 14 Q. I will rephrase it. Prior to your
 15 involvement in this litigation, had you ever had
 16 occasion to review the MAUDE database with regard
 17 to analyzing complication rates or frequencies
 18 with regard to devices?
 19 A. So prior to this case I have not
 20 done any analyses involving the MAUDE database.
 21 I was aware of the MAUDE database. I am aware of
 22 studies that have used the MAUDE database, but
 23 within my own research I have not used the MAUDE
 24 database for studies.
 25 Q. Have you ever sat down at a computer

1 limitations would be that there is known
 2 under-reporting with the MAUDE database, such
 3 that it is -- because it's a voluntary reporting
 4 system, it's suggested that many, many
 5 complications occurred that never get reported to
 6 the MAUDE database. So there is under-reporting.
 7 The second issue I believe that was mentioned is
 8 that -- that reporting rates can vary depending
 9 on if a device is newly released or if there was
 10 some media events, for example, that would make
 11 clinicians more aware if there is an issue and
 12 they would be more likely to report to the MAUDE
 13 database. Another limitation is that the -- in
 14 and of itself the MAUDE database can't really be
 15 used to calculate rates of complications because
 16 it's purely a numerator and it requires a
 17 denominator to generate rates. So those are some
 18 of the limitations that I recall offhand.
 19 Q. As far as medical literature, you
 20 mentioned the Kalva, Nicholson, Asch and Binkert
 21 studies. As you sit here right now, can you
 22 recall the names of any the other studies?
 23 A. I don't recall offhand.
 24 Q. You also told me earlier that one of
 25 your opinions was that --

1 A. Can I just add to that? Although I
 2 don't recall offhand, I mean, there are a large
 3 number of studies that support that opinion, and
 4 I have gone over all of those papers, so I would
 5 have to get back to you with a comprehensive list
 6 of those studies.

7 Q. But as far as actual names, you
 8 don't recall any names?

9 A. No, but if you were, for example, to
 10 give me a name, I would probably recall whether I
 11 had reviewed that or not.

12 Q. Are you familiar with the Preserve
 13 study that is underway?

14 A. I am aware that it is a study that
 15 is ongoing, comparing different types of vena
 16 cava filters from different companies.

17 Q. You testified earlier that, in your
 18 opinion, it was Bard's responsibility upon having
 19 the data to conduct safety and efficacy studies
 20 regarding these filters; correct?

21 A. I believe that's correct.

22 Q. Let's talk about the source of this
 23 responsibility. Are there any FDA regulations
 24 that you can cite that would require Bard to
 25 conduct studies based upon the data that was

1 company. I understand what you are saying about
 2 the clinician and patient. I am focused right
 3 now on the responsibility of the company, which
 4 you said. If you cannot cite an FDA or
 5 regulatory responsibility or requirement that
 6 these clinical studies be conducted under the
 7 circumstances, is the source of that
 8 responsibility, in your view, ethical?

9 MR. ROTMAN: Form.

10 THE WITNESS: I am not sure I
 11 understand the question.

12 BY MR. NORTH:

13 Q. You say they had a responsibility.
 14 That's the word you used. "Responsibility"
 15 generally means that there is -- something
 16 creates a responsibility. It can be a legal
 17 requirement, a regulation or it can be just a
 18 matter of good ethics. What is the source of
 19 this responsibility that you characterize here?

20 MR. JOHNSON: Form objection.

21 MR. ROTMAN: He testified.

22 MR. NORTH: He is testifying, not
 23 you.

24 MR. ROTMAN: That's right. So

1 given?

2 MR. JOHNSON: Form.

3 THE WITNESS: Can you repeat that
 4 question, please?

5 QUESTION WAS READ BACK.

6 THE WITNESS: So I would say I am
 7 not an FDA expert, so I can't cite FDA
 8 regulations, but I am a clinician and a clinical
 9 epidemiologist. If I became aware of increased
 10 complication rates with a device that I was
 11 implanting in my patients or that my patients had
 12 I would really want the company to let me know
 13 and do the studies to show me that in fact it is
 14 safe and this is not real, or to identify that
 15 this is a problem and we need to stop using this
 16 device or remove it. So I think that although I
 17 can't cite FDA regulations, it's common sense
 18 that as a clinician or a patient you would want
 19 to know that information. You know, it's the
 20 company's product. They have to stand behind it
 21 and provide the data to show that it's not
 22 causing complications.

23 BY MR. NORTH:

24 Q. My question was to do with
 25 responsibility from the standpoint of the

1 objection, asked and answered.

2 THE WITNESS: Can you repeat it one
 3 more time, please?

4 BY MR. NORTH:

5 Q. From the standpoint of the company,
 6 you say they had a responsibility to conduct
 7 clinical studies, given the data that they had.
 8 You cannot cite a regulatory requirement or
 9 responsibility that they conduct those studies,
 10 so I am trying to identify what's the source of
 11 that responsibility. Is it because good ethics
 12 would require it? Is it because of a regulation
 13 we haven't talked about? What is the source of
 14 that responsibility?

15 MR. JOHNSON: Form.

16 THE WITNESS: Maybe I could give an
 17 example which would be if, you know, you are
 18 driving a Honda Civic and there is a problem with
 19 the air bag, and this problem with this air bag
 20 is much more common with a Honda Civic than
 21 another brands. And the company knows about it.
 22 Maybe they have got to find out if this is a
 23 statistical aberration or is this a real problem
 24 and we have to fix it? Do we need to recall the
 25 car? The people that are driving it need to

1 know. Even the people that are selling it need
 2 to know. So it's the same thing with this
 3 situation with Bard and with Recovery and G2. If
 4 there is an indication from you know, the MAUDE
 5 database or clinicians are saying: We are seeing
 6 complications that we didn't see before. We are
 7 seeing them at a higher rate than we have seen
 8 before. The clinicians did what they could do.
 9 For example, they would look back at their
 10 database at their hospital and see all the
 11 patients that had it implanted, an IVC filter,
 12 and look at the complication rate. But the
 13 clinicians are not in a position to do a
 14 multi-centre study looking at this. They are not
 15 in a position to set up a randomized control
 16 trial comparing Recovery versus SNF. It's the
 17 responsibility of the company to do that if there
 18 is a concern that there is a safety issue here.
 19 Is it an ethical issue? I mean, is the basis of
 20 this ethical? I don't know. As I said before, I
 21 am not ethics expert, but it seems like common
 22 sense for the average person that the company
 23 that is producing this, if there is an issue it's
 24 their responsibility to put that issue to rest
 25 one way or the other. Could I add to that? I

1 think that opinion was expressed, I think, by
 2 Murray Asch as well when he did his, you know,
 3 his pilot study and had complications. And he
 4 understood that the company was going to do a
 5 large study after this to look at safety and
 6 efficacy, and it was never done and he felt
 7 misled in that sense. He recognized that the
 8 study that he did was a retrievability study
 9 which was not powered to look at complication
 10 rates, and that that needed to be done.

11 BY MR. NORTH:

12 **Q. You mentioned in discussing the**
 13 **Grassi article that you believe the comparisons**
 14 **made by Bard were apples and oranges comparisons.**
 15 **Explain what you meant by that.**

Q. Prior to your involvement in this
 litigation, were you aware of the claim by many
 people that the MAUDE database is affected by
 under-reporting?

A. You say "many people". I don't know
 what that means exactly. I knew before my
 involvement in this case about the MAUDE
 database. I knew that under-reporting was, you
 know, a limitation or potential limitation of the
 database.

Q. You don't know about Bard's
 particular policies and procedures of reporting
 adverse events to the MAUDE database, do you?

MR. ROTMAN: Objection.

THE WITNESS: I am sorry. Can you
 repeat that question, please?

BY MR. NORTH:

1 **Q. You do -- you have not studied**
 2 **Bard's own policies and procedures for reporting**
 3 **adverse events to the MAUDE database, have you?**

4 **A. I can't say that I have gone through**
 5 **every internal Bard document about their policies**
 6 **about reporting to the MAUDE database.**

7 **Q. And you can't -- you haven't made**
 8 **any assessment as to whether Bard reports more or**
 9 **reports less events than the competitor**
 10 **manufacturers, can you?**

11 **A. I am not sure what you mean by that.**
 12 **Could you repeat that?**

13 **Q. Have you made any study as to how**
 14 **Bard's standards for reporting events to the**
 15 **MAUDE database compare to the standards of other**
 16 **manufacturers?**

17 **A. I have not made a study of that and,**
 18 **as I say, I haven't looked exhaustively at the**
 19 **Bard documents about reporting, and I have no**
 20 **access to internal documents about other**
 21 **companies about their standards about reporting**
 22 **to the MAUDE database. It's my understanding**
 23 **that the companies are supposed to report all**
 24 **their complications to the MAUDE database, but as**
 25 **to whether that actually happens and whether**

1 **there is any coding problems, I can't speak to**
 2 **that.**

3 **Q. With regard to the safety signals**
 4 **that you believe the data demonstrated, were**
 5 **those signals statistically significant?**

6 MR. ROTMAN: Objection.

7 THE WITNESS: You know, the safety
 8 signals come from a couple of different sources.
 9 As I mentioned, they come from the MAUDE database
 10 and also the Betensky analyses which is derived
 11 from the MAUDE database. They come from the
 12 medical literature and they come from the Bard
 13 internal data about migration resistance. So I

14 [REDACTED]
 15 [REDACTED]
 16 [REDACTED]
 17 [REDACTED]

18 that it should be looked into. The Betensky
 19 analyses which replicate the MAUDE database
 20 analyses actually show highly statistically
 21 significant differences between the Recovery and
 22 SNF and between the G2 and SNF and, in fact, I
 23 believe that Dr. Betensky found some reporting
 24 errors between Bard and the MAUDE database, I
 25 think some transcription errors which actually

1 even magnified the size of the complication
 2 rates. They were clearly statistically
 3 significant in her analyses. The second group of
 4 data, second source of data here of increased
 5 complications comes from the medical literature,
 6 so the medical literature, there has never been a
 7 randomized controlled trial, to my knowledge, of
 8 Recovery versus SNF or G2 versus SNF. So they
 9 have not reported statistically significant or
 10 not statistically significant data. Most of the
 11 studies reported are registry data, so they
 12 follow a group of patients with the Recovery
 13 filters and then report complication rates. So
 14 they don't typically report statistical
 15 significance. That could be done if a meta
 16 analysis had been done. I think the company
 17 should have and could have easily done a meta
 18 analysis of all the reports from the medical
 19 literature and would have been able to provide
 20 some statistical information, but again the
 21 totality of the evidence from the medical
 22 literature, it's overwhelming that there is
 23 complication rates with these retrievable
 24 filters. And the last bit is the migration
 25 resistance testing was done internally in Bard

1 and, as I understand, that was also statistically
 2 significant, I believe, although I am not as --
 3 I didn't have complete access to that internal
 4 testing data, or perhaps it was in the documents
 5 I had but I didn't see it all.

6 BY MR. NORTH:

7 **Q. You have mentioned a number of sort**
 8 **of sources of information: Dr. Betensky's**
 9 **analysis, the consultant's analysis. Did you**
 10 **make any independent assessment as to whether the**
 11 **complication data showed a statistically**
 12 **significant safety signal?**

13 **A. Can you repeat that again?**

14 **Q. Okay. You tell us the data showed a**
 15 **safety signal. Did you independently yourself**
 16 **calculate whether that signal was statistically**
 17 **significant?**

18 **A. So you know, I do a lot of this**
 19 **research, this type of research in my regular**
 20 **practice where I do systematic reviews and meta**
 21 **analyses. So I am quite experienced in looking**
 22 **at the totality of evidence from multiple sources**
 23 **to do that determination. I did not do any**
 24 **analyses myself. I think that, you know, I went**
 25 **over in detail the Betensky analyses and I am**

1 very comfortable with those analyses. The
 2 analyses by the Bard internal consultant, I
 3 didn't have access to those analyses, so I
 4 couldn't replicate that. But I am not sure it's
 5 such an issue. If a company hires a consultant
 6 to look at their data and the consultant says:
 7 There is a problem, you better look at it, I
 8 think the company needs to treat that seriously.
 9 The -- in terms of the medical literature, I am
 10 capable of pooling the data from all these
 11 different reports. I haven't done it, but it
 12 could be done. I think it could have been done
 13 by Bard and should have been done. It still is
 14 possible it could be done.

15 Q. In all the medical literature that
 16 you have reviewed, have you seen any case report
 17 or instance where a Bard filter tilted an entire
 18 90 degrees?

19 MR. JOHNSON: Form.

20 THE WITNESS: I have seen many,
 21 many, many reports of tilted filters and I think
 22 that the definition of -- what's considered a
 23 tilted filter is more than 15 degrees. So there
 24 has been large numbers of patients with Bard
 25 filters that have tilted more than 15 degrees.

1 As to whether they have been more than 90
 2 degrees, I am not sure I could tell you that it
 3 was exactly 90 degrees. There certainly have
 4 been cases of complete embolization of Bard
 5 filters.

6 BY MR. NORTH:

7 Q. I am not asking about embolization.
 8 I am asking about where the filter simply tilts.
 9 Can you recall seeing any specific report of a
 10 Bard filter tilting 90 degrees?

11 MR. JOHNSON: Form.

12 THE WITNESS: I don't recall seeing
 13 that exactly, but again, I would say that I
 14 didn't go exhaustively through the case reports.
 15 I focused on the case series, and the cohort
 16 studies and the retrospective cohort studies. So
 17 individual cases, it's quite possible that there
 18 are cases if Bard filters tilting 90 degrees, but
 19 I can't point you to one.

20 BY MR. NORTH:

21 Q. You have talked about overall
 22 complication rates, that you believe the
 23 complication rates for the Recovery and G2 exceed
 24 the complication rate of the Simon Nitinol
 25 filter. Let's look at one specific complication.

1 For tilt and tilt alone, do you know how the
 2 complication rate of the Recovery filter compares
 3 to the Simon Nitinol filter?

4 A. I would have to refer back to the
 5 Betensky analyses. So if you showed me the
 6 spreadsheet I could walk you through the numbers.

7 Q. As you sit here now, without
 8 consulting Dr. Betensky's spreadsheet, do you
 9 know whether the data showed that the Recovery
 10 filter tilted more often than the Simon Nitinol
 11 or not?

12 A. There were multiple studies in the
 13 medical literature, case series registries,
 14 cohort studies, retrospective cohort studies
 15 looking at, for example, all patients in an
 16 institution that had a retrievable filter put in
 17 and then they report tilt rates. The tilt rates
 18 are -- they are high. They are different in
 19 different studies. There has been, at least
 20 since 2000, there has been very few, if any,
 21 reports of tilt with the Simon Nitinol filter in
 22 literature that I am aware of. To do a -- so
 23 that in itself is telling. We are seeing lots
 24 and lots of reports with tilts and other
 25 complications with retrievable filters over a

1 16-year period, and very few, if any,
 2 complications with a Simon Nitinol filter over
 3 that period in the medical literature; okay. I
 4 mean, really, what you would need -- what you
 5 would really like to see as a clinician is a
 6 head-to-head trial of patients randomized to a
 7 Simon Nitinol filter versus a retrievable filter,
 8 and follow them forward with systematic imaging
 9 to see.

10 Q. Move to strike the answer as not
 11 responsive to the question. Dr. Eisenberg, you
 12 kept answering the question in terms of studies
 13 of retrievable filters. My question didn't have
 14 to do with the generic term "retrievable
 15 filters". It had to do with the Recovery filter.

16 A. Yes.

17 Q. Do you know whether the data shows
 18 that the Recovery filter has a higher tilt rate
 19 than the Simon Nitinol filter?

20 A. Yes, I think the data is quite clear
 21 that the tilt rate is higher with the Recovery
 22 than it is with the Simon Nitinol. The Betensky
 23 analyses showed very clearly. It was also shown
 24 in the analyses done by the consultant with the
 25 MAUDE database for Bard. And in the medical

1 literature there has been very studies, as I say,
 2 of registries, cohort studies of the Recovery
 3 which show tilt. Over that same time period we
 4 have virtually no reports of tilt with the Simon
 5 Nitinol filter, so I think the totality of the
 6 evidence is quite convincing, very convincing
 7 that there is more tilt with Recovery than with
 8 the Simon Nitinol filter.

9 Q. Without the support of Dr.
 10 Betensky's data analyses would you be able to
 11 express an opinion as to whether the complication
 12 rates of the Bard filters, retrievable filters
 13 exceed that of the Simon Nitinol filter?

14 MR. JOHNSON: Objection. Form
 15 objection.

16 BY MR. NORTH:

17 Q. In a statistically significant
 18 fashion?

19 A. So in the absence of the Betensky
 20 analyses, then I would have to do those analyses
 21 myself and I -- I am very comfortable that my
 22 analyses would replicate what Dr. Betensky has
 23 done, and because she found highly statistically
 24 significant differences, I am sure I would find
 25 the same thing. But aside from that, we have the

1 G2 is higher than that of the Simon Nitinol in a
 2 statistically significant fashion is Dr.
 3 Betensky's analyses, which we discussed.

4 MR. ROTMAN: Objection.

5 THE WITNESS: Well, in addition to
 6 that we have -- we have several studies that --
 7 that compared the G2 to Recovery. So these were
 8 not randomized controlled trials, but they were
 9 studies where they looked at a group of patients
 10 who got Recovery or a group of patients who got
 11 G2 and compared their complication rates. And
 12 the complications we are seeing with the G2 were
 13 similar in incidence to the Recovery.

14 BY MR. NORTH:

15 Q. So it's your testimony that the
 16 complication rates for the G2 were equivalent to
 17 the complication rates -- equivalent to the
 18 complication rates for the Recovery filter?

19 A. In some studies. In addition, if I
 20 am not mistaken, in the Binkert study they also
 21 demonstrated that the migration rate or at least
 22 the caudal migration rate was much, much higher
 23 than had been reported to Recovery. So although
 24 we don't have direct statistical evidence, we
 25 have evidence that G2 had a high complication

1 Bard consultant who did those analyses and found
 2 statistically significant differences. So we
 3 have that, and we have Betensky and we have many,
 4 many reports in the literature of complications
 5 associated with Recovery and virtually no reports
 6 of complications with SNF.

7 [REDACTED]

8 [REDACTED]

9 [REDACTED]

10 [REDACTED]

11 [REDACTED]

12 [REDACTED]

13 [REDACTED]

14 [REDACTED]

15 [REDACTED]

16 [REDACTED]

17 [REDACTED]

18 [REDACTED]

19 [REDACTED]

20 [REDACTED]

21 [REDACTED]

22 [REDACTED]

23 [REDACTED]

24 [REDACTED]

25 [REDACTED]

Q. If that's true, then the only source
 of your opinion that the complication rate of the

1 rate. Recovery had a high complication rate.
 2 Recovery was statistically different than SNF
 3 but, in any case, we still have the Betensky
 4 analyses which I think are overwhelmingly
 5 convincing that complications with G2 are much
 6 greater than SNF.

7 Q. That's not my question. I am
 8 talking about G2 versus Recovery filter.

9 A. Yes.

10 Q. Did the Betensky analysis show that
 11 the G2 rate was equivalent to the Recovery rate
 12 as far as complications go?

13 MR. JOHNSON: Form.

14 THE WITNESS: I don't believe that
 15 they did a direct analysis, a direct comparison
 16 of G2 versus Recovery, although that could be
 17 done with the data that's available.

18 BY MR. NORTH:

19 Q. We were talking a few minutes ago
 20 about the tilt rate comparing Recovery and Simon
 21 Nitinol. Is it your belief that the tilt rate
 22 with the G2 is higher than that of the Simon
 23 Nitinol?

24 A. Yes, it is.

25 MR. JOHNSON: Are we going to take a

1 lunch break?

2 MR. NORTH: Let's take a pretty
3 quick one.

4 BY THE VIDEOGRAPHER: Going off the
5 record at 12:53 p.m.

6 BY THE VIDEOGRAPHER: This begins
7 disk number three in the deposition of Dr.
8 Eisenberg. We are back on the record at
9 1:47 p.m.

10 BY MR. NORTH:

11 Q. Good afternoon, Doctor. Could you
12 tell me when, in your opinion, the evidence first
13 showed a safety signal that the G2 had a higher
14 tilt rate than the Simon Nitinol?

15 A. I would have refer to the Betensky
16 analyses to tell you when that happened. I would
17 really need to have the spreadsheet in front of
18 me with the analyses.

19 Q. Did you make any independent
20 analyses of when that safety signal first became
21 apparent?

22 A. Well, I mean, I did my own analyses
23 of the data that was presented in the
24 spreadsheet, but I didn't do any actual
25 calculations myself.

1 Q. And would that be true as to any
2 complication mode that you would have to refer to
3 Dr. Betensky's calculations that determine when a
4 safety signal first became apparent with regard
5 to G2 vis-à-vis the Simon Nitinol filter?

6 A. There are several sources of
7 evidence here. So the Betensky analysis nicely
8 lays out, according to different dates, how much
9 data had accumulated and, you know, what the
10 reporting relative risk ratios were and when they
11 were statistically significant, and in a very
12 quantitative way. But in the medical literature,
13 you know, you see reports of this coming out. So
14 I would have to go back, and again I don't have
15 it in front of me. But you could see reports
16 coming out of registries, cohort studies of the
17 G2 reporting rates of tilt and fracture and
18 migration, et cetera. So I would have to go back
19 and actually pinpoint when those were actually
20 published and when the data was from.

21 Q. In other words, you would have to go
22 back and consult the medical literature and/or
23 Dr. Betensky's analysis to pinpoint a date when
24 the safety signals first became apparent. You
25 can't tell us that off the top of your head,

1 sitting here right now?

2 A. That's right. I would need the data
3 right in front of me.

4 Q. Doctor, have you attempted to
5 construct a clinical study that you believe
6 should have been conducted here?

7 A. I haven't constructed a clinical
8 study but I have given some serious thought to
9 what types of studies should have been done and
10 what they would look like, if that's what you are
11 asking.

12 Q. Yes. Well, tell me what you have
13 come up with in that regard.

14 A. Well, I think that most people would
15 agree that a randomized controlled trial is the
16 gold standard for safety and efficacy in the
17 medical world. So if you want to say that the
18 Recovery is substantially equivalent to the
19 predicate device, which is the SNF, you would
20 ideally do a randomized controlled trial,
21 randomizing patients to SNF versus Recovery and
22 then follow them forward with systematic imaging
23 and clinical follow-up long-term to see what the
24 outcomes are. And if you have an adequate sample
25 size and therefore, the power, you can identify

1 whether they are substantially equivalent both
2 for efficacy and for safety.

3 Q. Would it be ethical to conduct a
4 study like that, given the fact that you might
5 end up putting permanent filters in some people
6 that should have retrievable filters and
7 vice-versa?

8 MR. JOHNSON: Form.

9 THE WITNESS: I think that -- I
10 think that when the Recovery filter was first
11 available for commercial use and the G2 as well,
12 they were marketed as the permanent filters, so
13 they -- it would certainly be -- excuse me --
14 clinically ethical to randomize patients who need
15 a permanent filter to either an SNF or a
16 Recovery, because they were marketed and were
17 said to be okay to leave in permanently. So I
18 think that would be reasonable to do. If you had
19 a patient who you said this patient for sure
20 needs a retrievable filter, they would probably
21 not be a candidate for that study.

22 BY MR. NORTH:

23 Q. How long do you think, in general
24 terms, it would take to complete such a study?

25 MR. ROTMAN: Objection.

1 THE WITNESS: I think -- you know, I
 2 did analyses looking at sample sizes, and I think
 3 in order to do an adequately powered clinical
 4 trial you would need hundreds and perhaps
 5 thousands of patients for a trial like that. But
 6 I think that a multi-centre trial can randomise
 7 patients very quickly. These kinds of filters
 8 were being widely used and I think there would be
 9 many centres that would be interested in
 10 participating in such a trial. So I think that
 11 the patients could be randomized fairly quickly.
 12 Most of the studies that I saw only had six-month
 13 follow-up for their filters. I would like to see
 14 longer follow-up than that and, at a minimum, you
 15 would have six-month follow-up and then you could
 16 have 12 months with systematic imaging. So I
 17 think it would take several years to do.

18 BY MR. NORTH:

19 Q. Talking about sample size, the three
 20 sets of calculations that we marked as Exhibits
 21 that you did concerning confidence intervals and
 22 sample sizes, tell me a little bit more about why
 23 you did those for this case.

24 MR. ROTMAN: Objection.

25 THE WITNESS: Well, I think it was

1 general calculations and there is nothing within
 2 the calculations that relies on data specifically
 3 tied to filters?

4 A. That's not quite true. One of the
 5 calculations which was -- it's been labelled as
 6 Exhibit 4 is sample size calculations if one were
 7 designing a study to see if Recovery had a
 8 significantly higher complication rate than the
 9 rates quoted in the Grassi article. So for
 10 example, if -- in the Grassi article they are
 11 recording a death rate of less than one percent.
 12 If you wanted to identify a death rate of ten
 13 percent or more, which is huge, the minimum you
 14 would require would be 100 patients per arm, so
 15 200 patients in a trial. But that's a more than
 16 ten-fold difference in death rates. And for
 17 death you would obviously want much more
 18 confidence that there was no difference between
 19 the two, so you would need a much larger study
 20 than that. So I used the numbers in the Grassi
 21 article just as, you know, a comparison for one
 22 arm.

23 Q. Do you know whether the FDA has the
 24 same complication data that you have reviewed?

25 MR. JOHNSON: Form.

1 clear that there was a safety signal early on,
 2 and the company was aware of this and it should
 3 have been followed up with clinical studies,
 4 ideally a clinical trial. We are just talking
 5 about clinical trials. I think there is other
 6 studies that could be done as well, ideally a
 7 clinical trial, but if not a clinical trial, then
 8 a meta analysis. A large registry could also be
 9 done, which we could talk about if you like. But
 10 in considering a clinical trial, when I was doing
 11 these calculations I was thinking along the lines
 12 of if you were to do a clinical trial, how large
 13 a clinical trial would you need to do in order to
 14 really address this issue to say, yes, there is a
 15 difference in complication rates or no, I can
 16 safely say there is no difference in complication
 17 rates. So the sample size estimates that I
 18 calculated were based on -- I looked at different
 19 rates of complications and different sample sizes
 20 to see what kind of confidence interval you would
 21 have or what the sample size would be in order to
 22 have adequate power to look at differences in
 23 postulated complication rates.

24 BY MR. NORTH:

25 Q. Am I correct that those are sort of

1 THE WITNESS: I am not sure what you
 2 mean.

3 BY MR. NORTH:

4 Q. Do you know whether the United
 5 States Food and Drug Administration has reviewed
 6 the same complication data that you have
 7 reviewed?

8 A. As far as I am aware, they have not
 9 seen the Betensky analyses and I am -- you know,
 10 I am not -- I don't know what Bard reported to
 11 the FDA, so I don't know what the FDA is aware
 12 of. They have issued some warnings. They are
 13 clearly aware that there is issues with
 14 retrievable filters. And also there is many --
 15 as I mentioned, there is many reports in the
 16 literature, but I don't know if the FDA actually
 17 looks at them on an ongoing quantitative manner
 18 or whether, for example, the company is supposed
 19 to bring it to their attention. I don't know
 20 that process.

21 Q. Are you able to pinpoint, as you sit
 22 here today, able to pinpoint for me the point in
 23 time when you think it became obvious in the
 24 medical literature that the Recovery filter and
 25 G2 filter had excessive complication rates?

1 MR. JOHNSON: Form.

2 THE WITNESS: Again, you know, I
3 would have to have the articles in front of me to
4 see their publication dates and also when the
5 data was collected. But the HHE, again there is
6 one particular HHE where the Bard internal
7 consultant was reporting higher rates. I believe
8 it was from 2004. So I believe that the Recovery
9 was released in 2003 or very, very late in 2002
10 and that by 2004 there were reports of
11 complications with the Recovery. The G2, I would
12 have to go back and look.

13 BY MR. NORTH:

14 Q. Even in the Recovery, that wasn't in
15 the medical literature. I am talking about just
16 medical literature. Do you know when it became
17 obvious in the medical literature that there were
18 excessive complications with the Recovery filter?

19 MR. ROTMAN: Form objection.

20 THE WITNESS: I am going to have to
21 look back. I think the Asch article which was a
22 retrievability study, and in the first 32
23 patients there was a case of significant
24 migration and in the 33rd patient, which was not
25 reported in that article, there was fracture

1 which is -- you know, so this is a signal for a
2 clinician. If you see something in a relatively
3 small number of patients, that's alarming. One
4 would say: We need to look at this in a bigger
5 sample size. But again, I don't recall exactly
6 what year that was published. I think it was
7 pretty early on, because that study was done even
8 before the Recovery was released, as I recall.

9 BY MR. NORTH:

10 Q. Have you shared any of your concerns
11 about Bard filters with the radiologists at your
12 hospital?

13 A. No, I have not.

14 Q. Have you shared any of your concerns
15 about Bard filters with anybody at your hospital?

16 A. I have not, and part of that is my
17 understanding is this is all privileged
18 information and I really shouldn't be talking to
19 anybody about this stuff, if I am not mistaken.
20 Isn't that correct?

21 Q. I get to ask the questions, sir. So
22 the answer is you have not?

23 A. No, I have not.

24 Q. Okay. You talked about these
25 advisory boards for pharmaceutical companies that

1 you had been a member of. Have you ever been
2 directly employed by a pharmaceutical company or
3 a medical device company as opposed to consultant
4 work?

5 A. No, I have never been an employee of
6 a pharmaceutical company.

7 Q. Am I correct that Dr. Betensky
8 calculated a relative risk for the complications
9 of the G2 and the Recovery filter?

10 A. She calculated what she called a
11 reported relative risk -- reported relative risk
12 ratios. So what she did was she calculated the
13 relative risk for the Recovery and the relative
14 risk for the Simon Nitinol filter, and then she
15 divided the Recovery number by the SNF number to
16 come up with her reported -- reporting relative
17 risk ratio.

18 Q. Are you familiar with the concept of
19 a reported relative risk ratio?

20 A. I am certainly -- I know about
21 relative risk and relative risk ratios. The
22 reported relative risk ratio, I think, is just
23 referring to the fact that there may be
24 under-reporting in the MAUDE database. So these
25 are reported cases rather than prospectively

1 documented in a clinical study.

2 Q. Are you aware of any statistical --
3 or literature concerning statistics or literature
4 concerning epidemiology that defines the term
5 "reported relative risk ratio"?

6 A. I -- you know, I have pretty
7 extensive training in epidemiology but this, I
8 think, is a concept that's probably in a very
9 narrow area of epidemiology dealing with
10 databases like the MAUDE database. So it's not a
11 typical thing that I calculate. It's not a
12 typical thing that I am using. I use relative
13 risk ratios, but it's -- what I believe is the
14 reporting or reported part is only referring to
15 the fact that these are reported numbers in the
16 MAUDE database.

17 Q. Well, prior to your involvement in
18 this case, in discussions with Dr. Betensky, were
19 you aware of a data point called the reported
20 relative risk ratio?

21 A. I don't believe I was.

22 Q. Would you rely -- not rely. Would
23 you defer to Dr. Betensky as to the limitations
24 of the data and analysis she used?

25 A. Sorry? Could you repeat that?

Page 109

1 **Q. Would you defer to Dr. Betensky as
2 to the limitations on the data that she used for
3 her analysis?**

4 **A. I am relying on her data. I think
5 her data is robust. I respect her credentials as
6 a biostatistician. I think her analyses are
7 correct. Defer to her? I view it more as I am
8 on the epidemiology side and she is on the
9 biostatistical side. So I have more of a
10 clinical sense of what these numbers mean and she
11 has more of the numerical sense. So I think it's
12 more of a collegial effort.**

13 **Q. Well, would you defer to Dr.
14 Betensky as to any limitations on the data she
15 used for her analysis from a statistical point of
16 view?**

17 **A. I am not sure what you mean by
18 "defer". You mean if she suggested there was a
19 potential limitation, would I agree that that
20 might be a potential limitation?**

21 **Q. Well, if she suggested there were
22 potential limitations would you take issue with
23 her?**

24 **A. No. I agree there is potential
25 limitations with this type of analysis.**

1 speak to that.

2 BY MR. NORTH:

3 **Q. Do you believe that Bard violated an
4 ethical duty by not conducting the sort of study
5 you have advocated?**

6 **MR. JOHNSON: Form.**

7 **THE WITNESS: Sorry. Could you
8 repeat that one again also?**

9 BY MR. NORTH:

10 **Q. Do you believe that Bard violated an
11 ethical duty by not performing the sort of
12 clinical study you have advocated?**

13 **A. Again, I don't put myself out as an
14 expert on ethics, so I can't really speak to
15 that. I think that if you ask most clinicians
16 and most patients, they would say yes, Bard had
17 an ethical duty to follow up the signal with an
18 adequately powered and designed study. But as to
19 whether an ethicist would say that, I don't know.**

20 **Q. Are there any objective criteria
21 that define when a safety signal such as you have
22 described here arises?**

23 **MR. ROTMAN: Objection.**

24 **THE WITNESS: It's possible in the,
25 for example, pharmacovigilance literature there**

Page 110

1 **Q. Would you agree that, to your
2 knowledge, Bard did not violate a regulatory duty
3 by not conducting the sort of clinical study you
4 have proposed?**

5 **MR. JOHNSON: Form objection.**

6 **THE WITNESS: Can you repeat that,
7 please?**

8 BY MR. NORTH:

9 **Q. Would you agree that. To your
10 knowledge, Bard did not violate a regulatory duty
11 in not performing the sort of clinical study you
12 have advocated?**

13 **MR. JOHNSON: Objection.**

14 **MR. ROTMAN: Objection.**

15 **THE WITNESS: Can you repeat it one
16 more time?**

17 **QUESTION WAS READ BACK.**

18 **THE WITNESS: So I really can't
19 speak to that because, you know, as we discussed
20 earlier, I am not an FDA expert, so I don't know
21 what the regulatory requirements are. But you
22 know, as a clinician I would say, you know, my
23 expectation would be that if there was a signal
24 that it would be followed up by the company that
25 made the product. But regulatory-wise I can't**

1 is a -- that's an issue, and you alluded earlier
2 to an FDA definition for a signal. But for an
3 individual clinician even one case report or one
4 case that's not reported of a new complication
5 that you have not seen before to me is a safety
6 signal. So if you see something that you have
7 never seen before, you say what's going on here?
8 Is this happening in other places? We need to
9 look at this. That's the whole reason we have
10 case reports, and the case reports go back
11 decades and decades, because that was the early
12 sentinel system for safety issues. So if you
13 reported your case reports and somebody else in
14 Alaska reported the same safety issue and
15 somebody else in Texas reported it, all of a
16 sudden you would say: There is an issue here.
17 That's how AIDS was identified, just from a
18 handful of cases. So for me, as a clinician, I
19 would say one case is enough if it's a
20 complication that's not been seen before. But
21 it's possible that there are objective
22 definitions with different organizations, but I
23 don't know them offhand.

24 BY MR. NORTH:

25 **Q. So do I understand, from your**

Page 112

1 standpoint a single case report can create -- I
 2 am sorry, a case report of a complication can
 3 create a safety signal?

4 A. For me as a clinician, I would say
 5 yes, if you see a new retrievable filter has been
 6 put out and all of a sudden you see one has
 7 migrated to the right ventricle and is causing
 8 ventricular tachycardia and death and you have
 9 never seen that before, you would say: This is a
 10 big safety issue. We have got to stop putting
 11 these in and look and see if anybody else has had
 12 these kind of complications. In terms of
 13 clinical epidemiology, you start with a case or a
 14 series of small cases and then you put together a
 15 study to see if that in fact is a real safety
 16 issue or not. But depending on the severity of
 17 the presentation; yes, one case can be a safety
 18 signal.

19 Q. Do you believe that that is a
 20 standard belief among all clinicians that a
 21 single case report can create a safety signal?

22 MR. JOHNSON: Form objection.

23 THE WITNESS: Yes, I do believe
 24 that, and again I draw us back to the AIDS
 25 situation. The first patients showed up. There

1 Clement Grassi?

2 A. Yes.

3 Q. Same question. Do you have any
 4 specific criticisms of his opinions?

5 MR. ROTMAN: Form objection.

6 THE WITNESS: Well, again this is --
 7 I read it a while ago, so I would have to, you
 8 know, re-read it in order to get back to you, but
 9 there are two things that I recall from that
 10 deposition. One is he said in his deposition
 11 that the article I referred to as the Grassi
 12 article was not a guidelines article but was
 13 rather a quality assurance article, and that the
 14 numbers given in that article should not be taken
 15 as thresholds for safety but rather thresholds
 16 that should be used by hospitals to initiate a
 17 root-cause analysis if they see that they are
 18 approaching these numbers. So that's what he
 19 said in his deposition and I agree with that.
 20 The other -- one other thing he said in his
 21 deposition, which I don't agree with, is that if
 22 you have patients with retrievable filters that
 23 are having complications -- interventional
 24 radiologists like Dr. Asch feel those patients
 25 should be followed in a systematic manner with

1 were gay men with Kaposi's Sarcoma, which is a
 2 very, very rare condition which you never see
 3 except in immunocompromised people. And alert
 4 physicians reported it, and then there were a
 5 couple more reports, and then they looked into it
 6 and there was an epidemic. That was the tip of
 7 the iceberg. So I would say that most clinicians
 8 would say: Yes, a single case report can be a
 9 signal, depending on its severity. And if it's
 10 something you have never seen or heard of before
 11 it can be a safety signal and should be reported.

12 BY MR. NORTH:

13 Q. Have you read any depositions in the
 14 filter litigation by a Dr. David Feigal?

15 A. Yes, I did.

16 Q. Do you know Dr. Feigal?

17 A. No, I don't.

18 Q. Do you have any specific criticisms
 19 of his opinions that you read?

20 MR. JOHNSON: Form objection.

21 THE WITNESS: I read the deposition
 22 a while ago, so I would have to re-read it before
 23 I could speak to that question.

24 BY MR. NORTH:

25 Q. Have you read any depositions by Dr.

1 regular imaging and Dr. Grassi said -- if I
 2 recall correctly, that -- that the follow-up
 3 should be personalized to the individual patient
 4 rather than doing routine systematic monitoring
 5 of these patients, and I don't agree with that.
 6 I think that patients with a retrievable filter
 7 really need regular systematic follow-up with
 8 imaging in order to identify problems with the
 9 filters.

10 BY MR. NORTH:

11 Q. Do you know Dr. Grassi?

12 A. No, I do not.

13 Q. Have you read any depositions of
 14 Robert Carr?

15 A. Yes, I have.

16 Q. Do you have any specific criticism
 17 of Mr. Carr or his testimony?

18 A. Again, I read -- I guess there is
 19 more than one deposition by Mr. Carr, and I read
 20 them a while ago, so I would really have to
 21 re-read them in order to speak to any specific
 22 point.

23 Q. Have you read a deposition or
 24 depositions of Andre Chanduszko?

25 A. I read that deposition and I read

1 that a long, long time ago, and so I don't have
 2 much recollection of that. So again, I would
 3 have to re-read that in order to speak to that.

4 MR. NORTH: That's all the questions
 5 I have.

6 MR. ROTMAN: Let's take a break. We
 7 may be done. We may have a few questions.

8 BY THE VIDEOGRAPHER: Going off the
 9 record at 2:19 p.m.

10 BY THE VIDEOGRAPHER: Going back on
 11 the record at 2:28 p.m.

12 CROSS-EXAMINATION

13 BY MR. ROTMAN:

14 Q. Dr. Eisenberg, good afternoon.

15 A. Good afternoon.

16 Q. Thank you for your testimony this
 17 morning. I do have a question for you, just to
 18 go back over one of the topics that came up
 19 before lunch. Do you remember you were asked
 20 some questions about your background and
 21 experience in reviewing internal documents of
 22 medical device companies?

23 MR. NORTH: Objection, leading.

24 BY MR. ROTMAN:

25 Q. Do you remember that series of

1 what perforation, embolization, fracture. All of
 2 those issues, you need to be an expert in order
 3 to read the documents. In order to know about
 4 relative risk and statistically significant
 5 differences you need to have some epidemiologic
 6 biostatistical background. To know about -- and
 7 I only went through a very small portion of the
 8 internal documents, but in order to, you know, to
 9 look at the totality of the internal documents
 10 and see how the company dealt with the FDA, for
 11 example, you would need somebody who was an
 12 expert, you know, with FDA industry relations,
 13 which I am not. So I think that while there are,
 14 you know, an isolated communication, some of them
 15 a lay person might be able to read and certainly
 16 would potentially be alarmed at. Other internal
 17 documents you clearly need different types of
 18 expertise. For example, you know, migration
 19 testing, you need somebody who knows about in
 20 vitro testing which, you know, I don't portray
 21 myself as an expert in that area. So I think you
 22 need different types of experts in order to read
 23 and interpret different parts of, you know,
 24 internal company documents.

1 questions?

2 A. Yes, I do.

3 Q. And do you recall at one point you
 4 provided an answer about whether reviewing --
 5 whether reviewing an internal document required
 6 particular expertise?

7 MR. NORTH: Objection, leading.

8 THE WITNESS: Yes, I recall that.

9 BY MR. ROTMAN:

10 Q. What -- can you explain your answer
 11 on that issue?

12 MR. NORTH: Objection.

13 THE WITNESS: Yes. I am glad you
 14 asked, because I think I was not as clear as I
 15 could have been, which was, I think -- I think
 16 that when you read internal company documents for
 17 a device company there are certain things that a
 18 lay person can read and understand such as crisis
 19 management, alarmingly high rate. So there are
 20 things that do not require particular expertise
 21 to understand. But let's face it, this whole
 22 area is dealing with things that a lay person
 23 could not understand, that you need to be a
 24 medical expert of some sort in order to even know
 25 what an IVC filter is, to know what tilt, to know

1 BY MR. ROTMAN:

2 Q. I have no other questions.

3 RE-DIRECT EXAMINATION

4 BY MR. NORTH:

5 Q. Doctor, you had lunch today with Mr.
 6 Rotman, Mr. Mankoff and Mr. Johnson; correct?

7 A. Correct.

8 Q. And did you all discuss your
 9 testimony concerning whether lay people can
 10 understand these company documents?

11 MR. ROTMAN: Objection. Work
 12 product.

13 MR. NORTH: Are you instructing him
 14 not to answer?

15 MR. ROTMAN: Yes. Also
 16 attorney/client privilege.

17 MR. NORTH: On what grounds? Do you
 18 represent him? Are you his Attorney?

19 MR. JOHNSON: It's work product. We
 20 will say it on that.

21 MR. ROTMAN: It's work product.

22 BY MR. NORTH:

23 Q. But you did have lunch with these
 24 three gentlemen, didn't you?

25 MR. ROTMAN: You already answered

Page 121

1 that.

2 THE WITNESS: Yes, I did.

3 MR. NORTH: No further questions.

4 MR. JOHNSON: We will read.

5 BY THE VIDEOGRAPHER: This concludes
6 the deposition of Dr. Mark Eisenberg. Going off
7 the record at 2:33 p.m.

2 Re: Austin v. C.R Bard, et al

3 Case No.: CACE-15-008373 DIV: 07

4 Please take notice that on the 17th day of August
5 2016 you gave your deposition in the above cause.
6 At that time, you did not waive your signature.
7 The above-addressed attorney has ordered a copy
8 of this transcript and will make arrangements
9 with you to read their copy. Please execute the
10 Errata Sheet, which can be found at the back of
11 the transcript, and have it returned to us for
12 distribution to all parties.13 If you do not read and sign the deposition within
14 a reasonable amount of time, the original, which
15 has already been forwarded to the ordering
16 attorney, may be filed with the Clerk of the
17 Court.18 If you wish to waive your signature now, please
19 sign your name in the blank at the bottom of this
20 letter and return to the address listed below.21
22 I do hereby waive my signature.23

1 FLORIDA RULES OF CIVIL PROCEDURE
2 Rule 1.310
3 (e) Witness Review. If the testimony is
4 transcribed, the transcript shall be furnished to
5 the witness for examination and shall be read to
6 or by the witness unless the examination and
7 reading are waived by the witness and by the
8 parties. Any changes in form or substance that
9 the witness wants to make shall be listed in
10 writing by the officer with a statement of the
11 reasons given by the witness for making the
12 changes. The changes shall be attached to the
13 transcript. It shall then be signed by the
14 witness unless the parties waived the
15 signing or the witness is ill, cannot be found,
16 or refuses to sign. If the transcript is not
17 signed by the witness within a reasonable time
18 after it is furnished to the witness, the officer
19 shall sign the transcript and state on the
20 transcript the waiver, illness, absence of the
21 witness, or refusal to sign with any reasons
22 given therefor. The deposition may then be used
23 as fully as though signed unless the court holds
24 that the reasons given for the refusal to sign
25 require rejection of the deposition wholly or
